

PROJECT SUMMARY

Seychelles

PROJECT NAME

Roadmap for Seychelle's Green Energy Transition (RSGET)

GRANT OBJECTIVE AND ACTIVITIES

The project will support the government of Seychelle, a member of the [NDC Partnership](#), to align its NDC with the country's energy sector development goals. Specifically, the World Bank will analyze the alternative emissions reduction pathways and adaptation actions already adopted to meet government commitments. To accomplish this, the project will first analyze gaps in the existing energy policy framework and then develop a roadmap of regulatory improvements through stakeholder consultations. The government will then establish time-bound actions for the roadmap's implementation. Finally, the project will design data templates for monitoring the government's actions supporting NDC implementation. This project is being supported through the NDCP Climate Action Enhancement Package (CAEP).

COUNTRY FOCAL POINTS

Ministry of Environment, Energy and Climate Change; Ministry of Finance, Trade, and Economic Planning; Public Utilities Company; Seychelles Land Transport Agency; Blue Economy Research Institute; National Institute for Science, Technology and Innovation; Department of Risk and Disaster Management

WORLD BANK GROUP PRACTICE

-  Environment, Natural Resources, and Blue Economy
-  Energy and Extractives
