

THE WORLD BANK GROUP ARCHIVES

PUBLIC DISCLOSURE AUTHORIZED

Folder Title: Projects and Studies : World tables - (Economic Department, Economic Program Department) - set

Folder ID: 1071187

Series: World Debt Tables and World Economic Indicators

Dates: 12/01/1968 – 12/31/1968

Subfonds: Records of the Office of the Vice President, Development Policy (VPD) and the Development Policy Staff

Fonds: Records of the Office of the Chief Economist

ISAD Reference Code: WB IBRD/IDA DEC-01-12

Digitized: 02/03/2023

WORLD TABLESIntroductory Notes

1. The World Tables presented herewith replace those compiled and circulated in February 1968.
2. The present Tables represent both a revision and expansion of the previous series. During the past twelve months, revised data and additional information have become available for a large number of countries, and many of the historical growth rates and other percentage ratios given in the tables have been recomputed. A number of gaps in the previous tables have also been filled-in.
3. An additional table (Table 8) on Balance of Payments and Foreign Exchange Gap is now included. Attention is directed to the new alphabetical Index which has been designed to facilitate easier use of the Tables.
4. The reliability of the data employed varies considerably from country to country, and in many cases the figures are rough estimates only. Discrepancies and inconsistencies are also evident between certain of the statistical series published. In such cases, adjustments have been made wherever possible in order to ensure at least minimum consistency.
5. The data presented in the Tables have generally been rounded in order to facilitate a quicker grasp of overall performance and trend. The computations themselves, however, have been based as far as possible on the unrounded figures.
6. The concepts and definitions employed are explained in the preface to each table. Notes relating to the data themselves are given as footnotes on the respective country pages.

WORLD TABLES

- I. Introductory Notes
- II. Table of Contents
- III. Index
- IV. World Tables
 - Table 1: Annual Average Growth Rates
 - Table 2: Population, Labor Force, Education and Nutrition
 - Table 3: Selected Economic Relationships
 - Table 4: Resources, Product and Income
 - Table 5: Investment and Saving
 - Table 6: Government Current Revenue and Expenditure
 - Table 7: Foreign Trade, External Public Debt, and International Reserves
 - Table 8: Balance of Payments and Foreign Exchange Gap

Signs and Symbols

--	= zero
..	= not available
*	= figure too small to be expressed

Abbreviations

GDP	= gross domestic product
GNP	= gross national product
NDP	= net domestic product
C.o.l. Index	= cost of living index
f.c.	= factor cost
m.p.	= market prices

Resource Gap, as % of total resources	4/2		

WORLD TABLE 1Annual Average Growth RatesGENERAL NOTES

1. The rates given throughout this table are real growth rates, except for the following:
 - a) exports and imports of goods and services - nominal growth rates based on current U.S. dollar values
 - b) means of payment - nominal growth rates based on current domestic current values
 - c) prices.

2. The average period growth rates are the compounded rates of growth between initial and terminal years, the initial year being always one year earlier than the period described, e.g. for 1960-1965 the years employed are 1959 and 1965. This procedure has been followed in order to ensure that the average period growth rates are consistent with the average period rates and ratios given in other World Tables i.e. that the computations cover the same number of years in all cases.

3. Since data for 1949 are not generally available for most countries, 1950 had to be taken as the initial year for the earlier period. As a result, the average period growth rates cover nine years only, i.e. 1951-1959, whereas the rates and ratios in other Tables are ten year averages covering the period 1950-1959. However, this should not seriously impair the usefulness of the data for most purposes.

4. Over an extended period, and except where marked cyclical or irregular factors are present, the method of compounding between initial and terminal years generally yields a fair approximation of secular trend. Over a shorter period, however, the possible margin of error becomes greater, with the result that the average growth rates for 1960-1965 are probably somewhat less reliable than those for 1951-1959.

NOTES TO COLUMNS

Population [Col. 1]: The main sources used are the UN Demographic Yearbooks and Monthly Bulletins of Statistics.

Domestic Product [Cols. 2 and 3]: Wherever possible, the computations have been made on the basis of estimates at constant market prices. Where such estimates were not available, values at constant factor cost have been used.

The sources of information employed are: UN National Accounts Yearbooks and UN Monthly Bulletins of Statistics; IBRD Country Reports; AID, OECD and national publications.

Agricultural Production [Cols. 4, 5 and 6]: Unless otherwise stated, the growth rates recorded for 1951-1959 relate to the period 1953-1959. This is because the main sources of data employed (the FAO Agricultural Production Yearbooks and monthly bulletins) contain information from 1952 only.

In the absence of FAO data, indexes compiled by the US Department of Agriculture have been employed. Where information was not available from either of these sources, agricultural value added at constant prices has been used wherever possible; a footnote indicates when this method has been used. It is pointed out that the value added series at constant prices are frequently extremely crude, especially with respect to trend.

Following the FAO definition, "Food production" includes grains, starchy roots, sugar, pulses, edible oil crops, nuts, fruit, vegetables, wine, cocoa, livestock and livestock products. Tea and coffee are excluded. The per capita growth rates for food production have been obtained on the basis of the FAO indexes of total food production and the revised estimates of population growth in Col. 1. They may, therefore, differ from the per capita growth rates computed by the FAO.

Manufacturing Production [Col. 7]: The growth rates of manufacturing production have generally been computed on the basis of the country indexes of manufacturing production published by the UN Statistical Office or the statistical services of the various countries. Where such indexes were not available, use has been made of indexes compiled by the US Agency for International Development (AID) or of value added in constant prices.

Exports and Imports of Goods and Services [Cols. 8 and 9]: These are defined to exclude factor and transfer payments to and from abroad. However, since the main source used (the IMF Balance of Payments Yearbooks) does not usually detail factor income data separately, "investment income" has been used as an approximation. In most cases, the discrepancy is not of a magnitude likely to effect the derived picture of trend.

The rates given are nominal growth rates based on current values in US dollars.

Gross Domestic Investment [Col. 10]: The sources used are the same as for GDP (Cols. 1 and 2).

Private Consumption per Capita [Col. 11]: The sources used are the same as for GDP (Cols. 1 and 2).

Cost of Living and Wholesale Price Indexes [Cols. 12 and 13]: The rates are based on country indexes published by the UN Statistical Office, the IMF or the statistical services of the various countries. In developing countries, these indexes frequently reflect price movements in main cities and/or cover a limited number of items only. Where appropriate, this has been indicated in footnotes.

Implicit GDP Deflator [Col. 14]: This is a measure of the average price change of those goods and services included in the GDP. It has been derived by dividing annual indexes of GDP at current market prices by corresponding indexes of GDP at constant market prices. The sources used are the same as for GDP (Cols. 1 and 2).

Means of Payment [Cols. 15 and 16]: Total means of payment include the money supply (currency in circulation outside of the banking system and demand deposits held by the non-government sector) and quasi-money (time, savings deposits, etc. held by the non-government sector). The rates given are nominal growth rates based on domestic currency values.

The source of the data is the IMF International Financial Statistics.

WORLD TABLE 2Population, Labor Force, Education, and NutritionNOTES TO COLUMNS

POPULATION [Cols. 1 through 6 7]: The main sources used are the UN Demographic Yearbooks and Monthly Bulletins of Statistics and the ILO Yearbooks.

Total Population (Col. 1): The data are mid-year estimates. Where the series in the original sources appeared to be inconsistent over time, the figures have been appropriately adjusted.

Density (Col. 3): In interpreting these figures, it should be borne in mind that the proportion of habitable or cultivable land varies greatly from country to country.

Urban Population (Col. 5): The definition of urban population is not uniform for all countries (see UN Demographic Yearbook, 1963, pp. 8-9 para. 6). However, the data do provide an indication of the concentration of clearly non-rural population and, in individual countries, of the trend towards urbanization.

Labor Force as % of Total Population (Col. 6): The Labor Force comprises in principle all persons engaged in or actively seeking productive work in some branch of the economy. In practice, a number of countries exclude from the estimates certain categories of unemployed persons and persons below the legal working age. The coverage of unpaid family workers, particularly in rural areas, is also frequently incomplete.

LABOR FORCE / Cols. 7 through 14 7: For definition see "Labor Force as % of Total Population" above. The percentages have been calculated mostly on the basis of the total labor force, i.e. including employed and unemployed. Where this information was not available, employed population has been used.

Females in Labor Force (Col. 7): The percentage is greatly affected by the extent to which unpaid family workers in rural areas are included or excluded. This may vary considerably among countries.

Agriculture (Col. 9) includes forestry, hunting and fishing,

Mining (Col. 11) includes quarrying.

Transport (Col. 13) includes storage and communication.

EDUCATION / Cols. 15 through 18 7: The main sources of information are the UNESCO Yearbooks.

Adult Literacy Rate (Col. 15): Unless otherwise indicated, the rates relate to population aged 15 years and over.

"Primary Level (unadjusted)" enrolment ratio (Col. 16): This is a crude ratio expressing school enrolment at this level as a percent of the total estimated population aged 5-14 years. It does not make allowance for the fact that the age range of pupils enrolled in primary schools varies in different countries and does not necessarily correspond to the standard 5-14 age group employed in the computation.

"Secondary Level (unadjusted)" enrolment ratio (Col. 17): This is a crude ratio expressing enrolment at this level (general, vocational and teacher training) as a percent of total population aged 15-19 years. As for the primary level, it does not allow for national differences in the age range of pupils and the length of schooling.

"Combined Primary and Secondary (adjusted)" enrolment ratio (Col. 18): This expresses total enrolment at the primary and the secondary level as a percent of adjusted population figures corresponding more closely to the actual duration of schooling. The "adjusted" ratio is thus the most appropriate for purposes of inter-country comparison.

WORLD TABLE 3Selected Economic RelationshipsGENERAL NOTES

The average period percentages given in this table have been calculated as the arithmetic means of the percentage ratios for the individual years included in each period.

NOTES TO COLUMNS

PERCENT OF GROSS DOMESTIC PRODUCT [Cols. 1 through 10]: All computations under this head are based on domestic currency values at current market prices.

National Accounts [Cols. 1 through 5]: The main sources of information are the UN Yearbooks of National Accounts Statistics and Monthly Bulletins of Statistics, IBRD Country Reports and national sources. The sum of Cols. 1 through 4 less Col. 5 equals 100%.

exports and imports of goods and services (Cols. 4 and 5): These exclude factor payments to and from abroad.

General Government [Cols. 7 through 10]: Where information on general government was not available, central government data have been given with appropriate indication. Since the share of central government in general government is high in most developing countries, it may generally be taken as a fair approximation of the latter. For a number of countries, the data for the most recent years are budgetary rather than actual figures.

total current revenue and expenditure (Cols. 7 and 8): The data exclude transfers of all categories to and from abroad. Current expenditure includes interest on the public debt. The main sources of information are the UN Yearbooks of National Accounts Statistics and IBRD Country Reports.

defense expenditure (Col. 9): This excludes internal security, unless otherwise indicated. The main sources of information are the UN Yearbooks of National Accounts Statistics and the Statistical Yearbooks.

education expenditure (Col. 10): This includes, in principle, the consolidated expenditure on current and capital account of central, state and local government. Where only partial information was available, this has been given as an approximation with an appropriate footnote. For some countries, information is published on current expenditure only i.e. excluding the value of investment in school buildings and equipment. In such cases, the understatement of total expenditure may be considerable.

A number of countries report only central government expenditure. However, since central government transfers to other levels of government generally account for a large part of the total expenditure on education of these latter bodies, the resulting understatement should not in most cases be over-great. Important exceptions are indicated in footnotes.

The main sources of information are: IBRD Reports, UN Statistical Yearbooks and UNESCO Statistical Yearbooks.

National Saving as % of GNP at Market Prices [Col. 11]: Gross national saving is defined as gross domestic investment at current prices less balance of payments current account deficit. The balance of payments current account deficit is equal to imports of goods and services and factor payments to abroad less exports of goods and services and factor receipts from abroad. Transfers of all categories are excluded from the computation, since they are regarded as primarily capital flows, i.e. as means of financing the current deficit.

Tax Revenue as % of National Income [Col. 12]: Tax revenue is defined to include social security contributions but to exclude income from royalties. In practice, however, it has not always been possible to distinguish clearly between tax and other receipts, and the figures should be regarded as approximations. Wherever possible, the tax data employed relate to the general government sector, i.e. the consolidated receipts of central, state and local governments. Where central government data only were available, these have been used and appropriately footnoted.

The main sources of information are IBRD Country Reports and the UN Yearbooks of National Accounts Statistics.

External Public Debt as % of GNP [Col. 13]: The figures include both government and government-guaranteed debt; they reflect disbursed debt only. The computations have been made on the basis of gross national product at factor cost, in US dollars.

The data on external debt have been compiled by the Statistics Division of the IBRD. The US dollar estimates of GNP were prepared by the Comparative Data Unit.

Public Debt Service Ratio [Col. 14]: This is defined as the ratio of external public debt service to the total value of exports of goods and services and factor income from abroad. No adjustments have been made for remittances of foreign corporations. Transfers received from abroad are excluded from the computations.

External public debt service comprises the interest and amortization payments on the external public debt, as defined above.

Unless otherwise stated, the average percentages recorded for 1950-59 relate to the period 1956-59. External public debt service data are generally not available for years prior to 1956.

International Reserves as % of Imports [Col. 15]: In accordance with IMF practice, international reserves have been taken to comprise the gross holdings of gold and convertible foreign exchange of central banks and government entities and the reserve positions of IMF members with the Fund. Commercial bank holdings of foreign exchange are excluded. The data have been taken from IMF publications and relate to the end of each period.

The percentages have been calculated on the basis of total imports of goods and services and factor payments to abroad.

Gross Marginal Capital Output Ratio [Col. 16]: The ratios given in the table have been obtained by dividing the gross addition to capital stock (aggregate gross investment) in each period by the increase in gross domestic product in the same period. They are thus marginal (incremental) ratios indicating the number of units of value of new investment that were associated, on average, with an increase of one unit of value in the domestic product.

In order to make allowance for the maturation period of new investment, the computations have been carried out with a lag of one year, e.g. for the period 1960-1965, the annual investment for the years 1959 through 1964 has been aggregated to form the numerator of the ratio, while the difference between the GDP in 1965 and that in 1959 constitutes the denominator. The computations are based throughout on data at constant market prices.

The main sources of information are the UN Yearbooks of National Accounts Statistics, IBRD Country Reports, and AID Economic Data Books.

WORLD TABLE 4

WORLD TABLE 4Resources, Product and IncomeGENERAL NOTES

1. The main sources of information underlying the computations in this Table are: the UN Yearbooks of National Accounts Statistics and Monthly Bulletins of Statistics, IBRD Country Reports and national sources.

NOTES TO COLUMNS

RESOURCES [Cols. 1 and 2]: Resources are defined as the sum of gross domestic product at current market prices and net imports of goods and services.

Net Imports of Goods and Services (Col. 2): These comprise imports of goods and services less exports of goods and services. Factor payments and transfers to and from abroad are excluded from the calculation.

USE OF RESOURCES [Cols. 3 through 5]: These represent the major end uses to which total resources (GDP plus net imports) were allocated. The computations are based on values at current market prices.

General Government Consumption (Col. 4): This consists of the consolidated net expenditure incurred by all agencies of central, state and local governments in the provision of current services to the population. (For a more detailed definition see notes to Table 6.)

GROSS DOMESTIC PRODUCT BY INDUSTRIAL BRANCH [Cols. 6 through 14]:
Unless otherwise indicated, the distributions have been calculated on the basis of values at current factor cost.

Agriculture (Col. 6): Includes forestry, hunting and fishing.

Mining (Col. 7): Includes quarrying.

Transport and Communication (Col. 8): Includes storage.

Trade and Finance (Col. 12): Comprises wholesale and retail trade, banking, insurance and real estate.

Public Administration and Defense (Col. 13): Comprises those agencies of general government whose activities have not been classified under other branches.

WAGES AND SALARIES AS % OF NATIONAL INCOME [Col. 16]: Wages and salaries include supplements paid by employers. National income equals net national product at factor cost.

GROSS NATIONAL PRODUCT IN 1964 U.S. DOLLARS [Cols. 16 and 17]:
The Estimates of GNP and GNP per capita for 1964 were computed directly from the domestic currency estimates of GNP at current prices. For most countries, conversion into US dollars was made on the basis of par or official exchange rates. In a number of cases where these rates appeared to have become unrealistic as the result of inflation or other causes, appropriate adjustments were made. For countries with multiple exchange rate systems, the rates used were those which appeared to be closest to an equilibrium rate.

The estimates of GNP and GNP per capita in 1964 US dollars for years other than 1964 were obtained by extrapolation, on the basis of real growth rates computed from the domestic currency estimates at constant prices.

The GNP estimates in US dollars are given at factor cost rather than at current market prices, i.e. excluding indirect taxes net of subsidies. This has been done in order to minimize the possible distorting effect on relative country ranking due to the differing tax policies followed by the various countries.

WORLD TABLE 4

Cameroon:

/a Data in Columns 6 through 14 relate to GDP at current market prices.
/b 1956. /c Data in Columns 1 through 14 for 1959. /d Data in Columns 1 through 14 for fiscal year ending June 30.

Central African Republic:

/a Data in Columns 1 through 5 for 1962, those in Columns 6 through 14 for 1961.
/b Total consumption. /c Includes mining. /d Data in Columns 1 through 5 for 1964.

Ceylon:

/a Data before 1956 are not strictly comparable with those from 1956 on.

Chad:

/a Data in Columns 6 through 14 relate to GDP at current market prices. /b 1961.

Chile:

/a Data in Columns 6 through 14 relate to NDP at factor cost; before 1960 they are not comparable with those from 1960 on.

Germany (Eastern):

/a Data in Columns 3 through 5 are percentages of gross material product and relate to individual consumption, collective consumption and gross investment. Data in Columns 6 through 14 relate to gross production. /b Includes mining and quarrying.

Germany, Federal Republic of:

/a Data in Columns 6 through 14 relate to GDP at current market prices. /b Includes utilities.

Ghana:

/a Data in Columns 6 through 14 relate to GDP at current market prices. /b Includes some food processing and sawmilling. /c Data in Columns 6 through 14 for 1964.

Guatemala:

/a Data in Columns 6 through 14 relate to GDP at market prices. Before 1965 the distribution of GDP by branch is based on data at constant 1958 prices.

Venezuela: /a Data before 1960 are not strictly comparable with those from 1960 on. /b Includes petroleum refining.
Yugoslavia: /a Resources are defined as gross material product plus net imports; they are distributed among individual consumption, collective consumption, and gross investment. Data in Columns 6 through 14 relate to gross material product. /b Data in Columns 1 through 15 are for 1952. /c Includes mining.
/d As percentage of net material product.

WORLD TABLE 5Investment and SavingGENERAL NOTES

1. The calculations in this table are based on data in domestic currency at current market prices.
2. The average period percentages have been calculated as the arithmetic means of the percentage ratios for the individual years included in each period.
3. The percentages in Columns 1 through 8 relate to total gross domestic investment (including change in inventories); those in Columns 9 through 16 relate to gross domestic fixed investment, (i.e. excluding change in inventories).
4. The main sources of data are: UN Yearbooks of National Accounts Statistics and Monthly Bulletins of Statistics; and IBRD Country Reports.

NOTES TO COLUMNS

GROSS DOMESTIC INVESTMENT BY TYPE OF ASSET [Cols. 1 through 4]:
The percentages add to 100%.

Machinery and Equipment (Col. 1): This item includes transport equipment, machinery and other equipment.

Buildings (Col. 2): These include both dwellings and non-residential buildings.

GROSS DOMESTIC INVESTMENT BY SOURCE OF FINANCE [Cols. 5 through 8]:
The percentages add to 100%.

Gross National Saving [Cols. 5 through 7]: The data are gross of depreciation allowances. Gross national saving is obtained as the difference between total gross domestic investment and balance of payments current deficit, as defined below.

private sector saving (Col. 5): Comprises the saving of private corporations, unincorporated enterprises, and households and private non-profit institutions.

general government saving (Col. 6): Comprises the saving of central, state and local governments, including the depreciation allowances of government enterprises.

public corporation saving (Col. 7): Public corporations are corporations established and regulated by public law whose shares are wholly or mainly owned by public authorities and/or whose policies are effectively influenced by these authorities. Non-corporate government enterprises (e.g. Post Office, etc.) are not included.

Balance of Payments Current Deficit [Col. 8]: This is defined as imports of goods and services and factor payments to abroad less exports of goods and services and factor payments from abroad. Transfers of all categories are excluded from the computation, and are regarded as a means of financing the deficit.

GROSS DOMESTIC FIXED INVESTMENT BY SECTOR [Cols. 9 and 10]: The public sector (Col. 10) consists of the general government sector and public corporations, as defined above.

GROSS DOMESTIC FIXED INVESTMENT BY INDUSTRIAL BRANCH [Cols. 11 through 16]: The percentages add to 100%.

Agriculture (Col. 11): Includes forestry and fishing.

Transport and Communication (Col. 14): Includes storage.

PUBLIC SAVING AS % OF PUBLIC INVESTMENT [Col. 17]: Public saving is equal to general government saving plus the saving of public corporations (see Cols. 6 and 7 above). The percentage ratio has been calculated on the basis of gross public fixed investment (see Col. 10 above).

 Zambia: /a 1954-59. /b Includes other construction. /c Total saving. /d Includes housing. /e 1960-64. /f 1964.

WORLD TABLE 6Government Current Revenue and ExpenditureGENERAL NOTES

1. The General Government sector comprises all agencies of central, state and local government other than entities classified as government enterprises or public corporations.
2. Where data on general government were not available, the corresponding data on central government have been given with an appropriate indication.
3. All computations are based on values at current prices.
4. The main sources of information are the UN Yearbooks of National Accounts Statistics, UN Statistical Yearbooks, IBRD Country Reports, and AID studies.

NOTES TO COLUMNS

GENERAL GOVERNMENT CURRENT REVENUE BY CATEGORY [Cols. 1 through 6]:
Current transfers received from abroad are excluded. Cols. 1,
5 and 6 add to 100%.

Direct Taxes (total) [Col. 1]: Comprise all taxes and surtaxes levied as a charge on the income of households and private non-profit institutions (including contributions to social security); corporate income and excess profits taxes; and taxes on undistributed profits or on capital stock which are levied at regular intervals. Taxes levied at irregular intervals on capital or wealth are excluded.

Columns 2 through 4 add to Column 1.

Direct Taxes on Households [Cols. 2 and 3]: Include also taxes on private non-profit institutions and unincorporated enterprises. Social security contributions (Col. 2) include the contributions of both employers and employees.

Indirect Taxes [Col. 5]: Comprise taxes other than those levied on income and wealth and in the assessment of which no account is taken of the personal circumstances of the tax-payer. Also included are all taxes chargeable to business expenses of enterprises. The bulk of indirect taxes consists of sales taxes and customs duties.

Non-Tax Revenue [Col. 6]: Comprises income from property and entrepreneurship (i.e. net rent, interest, dividends or royalties accruing to the general government from the ownership of assets); and payments made by households and non-profit institutions such as fees, fines and other penalties.

GENERAL GOVERNMENT CURRENT EXPENDITURE BY CATEGORY: Current transfers to abroad are excluded. Columns 7 through 11 add to 100%.

Consumption Expenditure [Cols. 7 and 8]: This comprises the consolidated net expenditure incurred by general government agencies in the provision of current services to the population. It consists of the compensation of government employees and current purchases of goods and services from enterprises and from the rest of the world less the value of goods and services, other than surplus stores, sold by these agencies to enterprises and households. Defense expenditures of all categories are recorded as consumption expenditure. Expenditure on capital formation for civilian purposes is excluded.

Subsidies [Col. 9]: Consist of the current grants made by public authorities to producers.

Transfers to Households and Non-Profit Institutions [Col. 10]: These comprise the unilateral payments made by general government (other than interest on the public debt) which constitute additions to the recipients' incomes. Such payments include sickness, unemployment and welfare benefits, scholarships and grants (other than for investment purposes), etc.

Interest on Public Debt [Col. 11]: Includes interest on both domestic and foreign debt.

GENERAL GOVERNMENT SAVINGS AS % OF GENERAL GOVERNMENT CURRENT REVENUE
/Col. 12/: General government saving is equal to total general government current revenue less total current expenditure, as defined above.

CENTRAL GOVERNMENT SHARES IN GENERAL GOVERNMENT CURRENT REVENUE AND EXPENDITURE /Cols. 13 and 14/: For the purpose of computing these ratios, central government current revenue and expenditure generally exclude the Social Security sector, and current transfers to and from non-central government agencies and to and from the rest of the world.

WORLD TABLE 7Foreign Trade, External Public Debt, and International ReservesNOTES TO COLUMNS

Foreign Exchange Rate [Col. 1]: The exchange rates are as of the end of each year. Unless otherwise indicated, they are either the par value rates agreed with the International Monetary Fund or the official rates. It is pointed out that these rates frequently remain pegged despite a considerable rise in the domestic price level and for this reason do not necessarily correspond to equilibrium rates. Specifically, they may be inappropriate for converting domestic currency values into US dollar equivalents - for which purpose further adjustments are necessary.

In the absence of either a par or an official rate (e.g. countries operating a multiple exchange rate system), the rate given is that which appeared to be closest to an equilibrium rate; appropriate indications are given in footnotes. These rates too should be regarded as approximations only. Where an approximate equilibrium rate could not be determined, no information has been entered.

Import taxes and surcharges and export subsidies, although often used as devices to supplement the official exchange rate, are not incorporated in the exchange rates given in the table.

The name of the domestic currency unit is noted under each country.

The sources of data are: IMF International Financial Statistics and UN Statistical Yearbooks.

IMPORTS AND EXPORTS OF GOODS AND SERVICES

These are defined to exclude factor and transfer payments to and from abroad. However, since factor payments are not detailed separately in the main sources of information employed (IMF Balance of Payments Yearbooks), the item "Investment Income" has been used as an approximation.

All values are in current US dollars. The data for 1966 are in most cases preliminary.

Where information on aggregate imports or exports of goods and services was not available, the value of merchandise trade only has been entered in Columns 2 and 8 respectively, and appropriately footnoted. In such cases, the value of merchandise imports is generally recorded c.i.f.

Apart from the IMF Balance of Payments Yearbooks, other sources used include IBRD Country Reports, IMF International Financial Statistics and IMF-IBRD Direction of Trade.

Merchandise Imports as % of Total Imports [Col. 4]: In accordance with balance of payments procedure, non-monetary gold is excluded from merchandise imports. Unless otherwise indicated, the calculations have been made on the basis of merchandise valued f.o.b. The main sources of information are the IMF Balance of Payments Yearbooks.

Merchandise Imports, by Category [Cols. 5 through 7]: The main sources of information used are the UN Yearbooks of International Trade Statistics. The distributions have generally been calculated from c.i.f. values.

foodstuffs (Col. 5): are taken as equal to item 0 "Food and Live Animals" of the UN Standard International Trade Classification (SITC) but excluding "live animals" (001) and "fodder" (081).

machinery and equipment (Col. 6): are taken as equal to Item 7 "Machinery and Transport Equipment" of the UN Standard International Trade Classification (SITC).

fuels and lubricants (Col. 7): are taken as equal to Item 3 "Mineral Fuels, Lubricants, Related Materials" of the UN Standard International Trade Classification (SITC).

Deviations from the above classifications are indicated in footnotes.

Foreign Travel as % of Total Exports [Col. 11]: Proceeds from foreign travel are taken as equal to Credit Item A-5 "Travel" in the IMF Balance of Payments Basic Global Statement. This is therefore an approximation only of actual receipts from foreign tourism.

Terms of Trade Index [Col. 12]: This index measures the relative change in export prices as compared with that in import prices. It is calculated by dividing the annual unit value index for exports by that for imports. The base year for the computations is 1959=100. The main sources of data are the UN Yearbooks of International Trade Statistics.

EXTERNAL PUBLIC DEBT [Cols. 13 through 15]: The external public debt includes both government and government guaranteed debt. The data, which relate to disbursed debt only, have been compiled by the Statistical Services Division of the IBRD. Values are in millions of current US dollars.

Total Debt (Col. 13): Represents debt outstanding at the end of each year.

Total Debt Service (Col. 14): Comprises the annual interest and amortization payments on the external public debt, as defined above.

INTERNATIONAL RESERVES [Col. 16]: In accordance with IMF practice, international reserves have been taken to comprise the gross holdings of gold and convertible foreign exchange of central banks and government entities and the reserve positions of IMF members with the Fund. Commercial bank holdings of foreign exchange are excluded. The data have been taken from IMF publications and relate to the end of each period.

WORLD TABLE 8Balance of Payments and Foreign Exchange GapGENERAL NOTES

1. The main sources of information underlying the analysis and computations in this Table are: IMF Balance of Payments Yearbooks, UN International Trade Yearbooks, IMF International Financial Statistics and IBRD Country Reports.
2. The definitions followed are mainly those laid down in the IMF Balance of Payments Manual and which are used in compiling the IMF Balance of Payments Yearbooks. For detailed information, these sources should be consulted. Special attention is directed to the definitions of the private and public sectors. These are defined primarily from the point of view of the sectoral structure of the domestic economy, i.e. the country preparing the balance of payments statement. Thus, for example, a loan extended by a private bank in Country A to the government of Country B appears in the balance of payments of Country A as a private capital outflow and in that of Country B as a public sector capital inflow. In general, the classification of enterprises or entities into the private or public sector is made on the basis of the extent to which their activities are determined by market forces or reflect primarily government economic policies.
3. The IMF data on capital flows for the years 1950 and 1955 are broken down both into short and long-term capital and into Private Sector and Official and Banking Institutions. Since 1960, the capital account is broken down into Non-Monetary and Monetary Sectors only. Because of this change in the IMF classification, the comparison of capital movements between the two periods may not reflect accurately the trend of these transactions.
4. In principle, the Foreign Exchange Gap should include debt amortization payments of all types. However, owing to lack of detailed information, only long-term amortization payments have been included in the present table.

NOTES TO COLUMNS

MERCHANDISE EXPORTS AND IMPORTS (Columns 1 through 3): The data are on a f.o.b. basis unless otherwise indicated.

SERVICES (Columns 4 through 6): These comprise invisibles such as freight, other transportation, travel, embassy and consular expenditures, other government services, merchandise insurance and other services, excluding investment income.

NET INVESTMENT INCOME RECEIPTS (Column 7): This is defined as the income (interest, dividends, profits, etc.) of residents from capital loaned or invested abroad less the income of foreigners from capital loaned or invested in the compiling country.

CURRENT SURPLUS (Column 8): Current surplus is defined as exports of goods and services including investment income receipts less imports of goods and services including investment income payments. Transfer receipts and payments are excluded from the current account balance.

LONG-TERM AMORTIZATION (Column 10): This comprises the repayment of the principal of private and public long-term loans received. Since the commercial banks and the central institutions do not always give sufficient breakdown, long-term amortization payments may be understated.

PRIVATE LONG-TERM BORROWING (Column 14): This comprises the gross private long-term borrowing of the private sector. Since the commercial banks usually give only changes in assets and liabilities, the level of private long-term borrowing is likely to be understated. For the definition of the private sector see paragraph 3 of General Notes.

GOVERNMENT LONG-TERM BORROWING (Column 15): This comprises the gross long-term borrowing of the government sector. Since the Central Institutions do not always give a complete breakdown of their transactions, the level of government long-term borrowing may be understated. For the definition of the government sector see paragraph 3 of General Notes.

TOTAL NET SHORT-TERM BORROWING (Column 16): For the years 1950 and 1955, this comprises all short-term transactions of both the private and public sectors. From 1960 onwards, following the change in IMF classification, this item includes only those short-term capital movements which can clearly be identified from the balance of payments. Because of identification difficulties, this item reflects mainly the short-term capital movements of the private non-monetary sector. Short-term is defined to represent a period of less than one year.

OTHER CAPITAL, NET (Column 18): This comprises those capital transactions of the private and public sectors not classified in the above items. The main items included in Other Capital, Net are: subscriptions to International agencies, changes in holdings of local currency, changes in assets and liabilities of the commercial banks, changes in payments agreements, swaps, etc.
