

ARGENTINA

Region: Latin America & Caribbean
Income Category: Upper-middle Income

Human capital - people’s knowledge, skills, and health - drives productivity and growth. The Human Capital Index Plus (HCI+) measures the human capital a child born today can expect to accumulate over their working life, extending the original HCI by incorporating tertiary education and work experience. This brief summarizes **Argentina’s** HCI+ score and its performance in building human capital.

What is Argentina’s HCI+ and what does it mean?

Argentina’s HCI+ score is 200 (out of a maximum of 325), reflecting its investments in health, education, and employment. A 10-point increase in the index would translate into approximately 10 percent higher future income. Closing the current gaps in these areas relative to high-performing countries with similar GDP per capita would boost future income by 61%.

How does Argentina’s HCI+ compare to other countries?

Argentina’s HCI+ is higher than the average for the **Latin America & Caribbean region (194)** and lower than the average for **upper-middle-income countries (204)**.

Argentina’s HCI+ score is also **48 points lower than the OECD average.**

What explains Argentina’s HCI+?

The HCI+ has three components corresponding to health, education, and employment.

The HCI+ score for the **Health pillar is 45**, slightly higher than the **regional average of 44**.

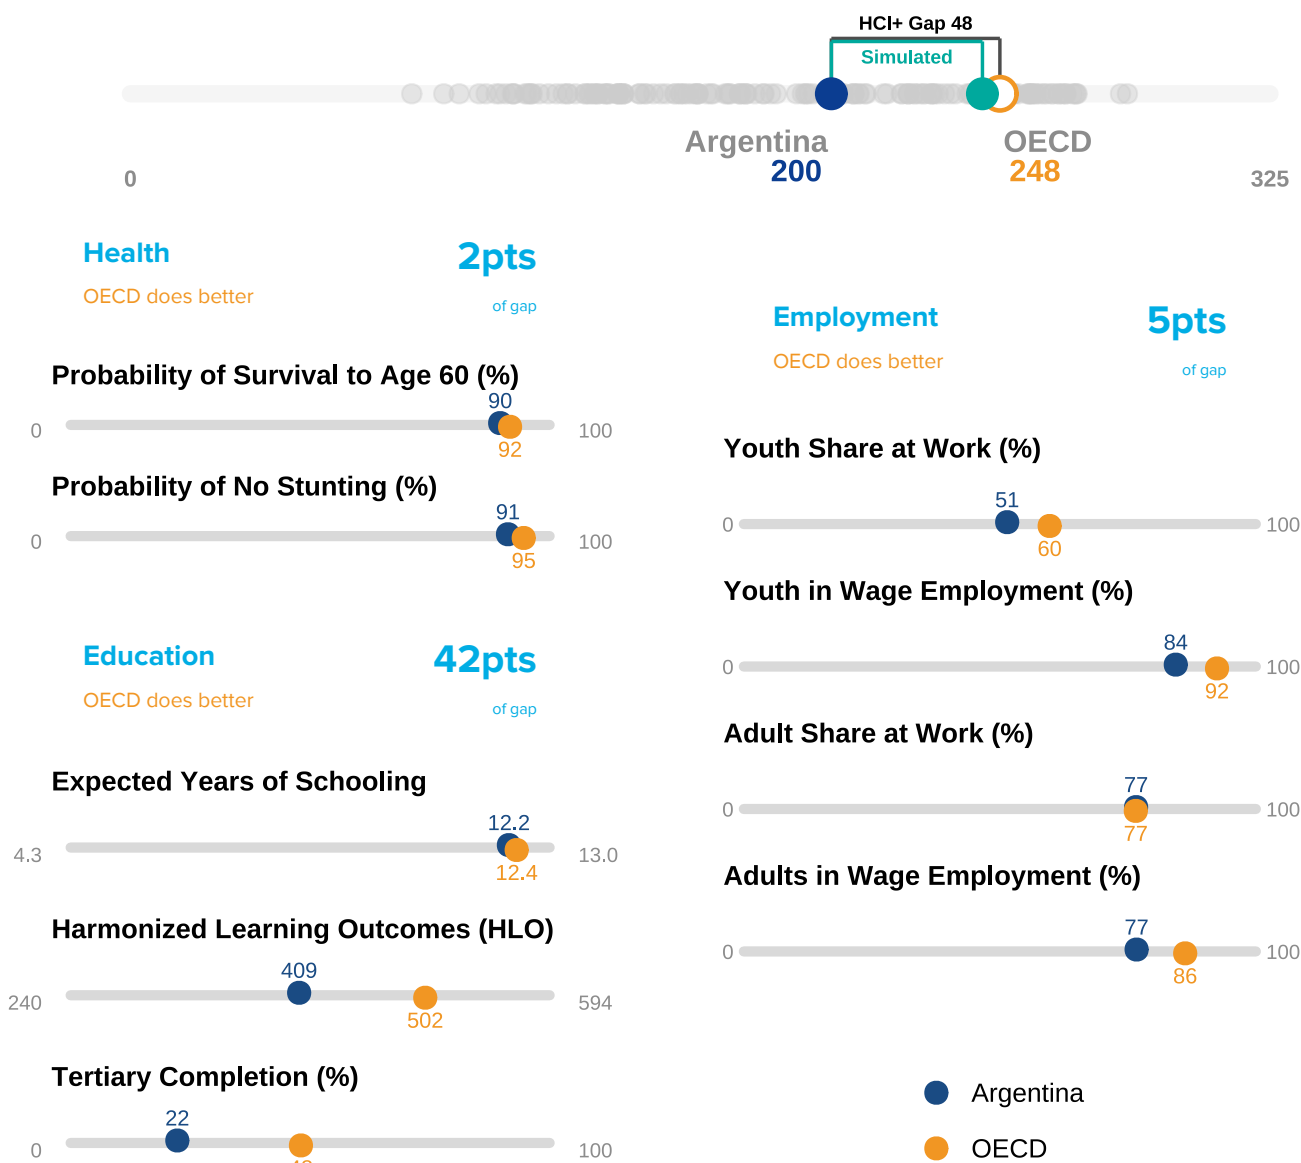

The HCI+ score for the **Education pillar is 110**, slightly higher than the **regional average of 109**.

The HCI+ score for the **Employment pillar is 44**, slightly higher than the **regional average of 42**.

What indicators are responsible for Argentina's HCI+ gap with OECD?

Argentina's HCI+ score (200) is lower than the OECD average (248). The indicators that account for the largest share of the HCI+ gap between Argentina and the OECD are **Harmonized Learning Outcomes (HLO), tertiary completion, and youth share at work**. Raising these indicators to OECD levels would increase Argentina's score to **243**, boosting future income by approximately 42.9%.

What is Argentina's HCI+ gender gap?

The HCI+ score for **women in Argentina is 195** compared to **205 for men**. The 10-point gap indicates that women's earning potential will be 10% lower than men's due to differences in the human capital acquired by men and women in Argentina.

Note: All values are derived from internationally comparable public datasets.
