

# PROJECT SUMMARY

Chile

## PROJECT NAME

Support for *Scaling Up Electric Mobility in Urban Areas*

## GRANT OBJECTIVE AND ACTIVITIES

Building on its previous engagement in the country on e-mobility, the NDC-SF is supporting an activity focused on assessing and documenting electro-mobility options for the public transport system in **Chile's** urban areas. A member of the [NDC Partnership](#), Chile has emerged as a regional champion for its vision to decarbonize its public transport system. A report showcasing Chile's experience of using electric vehicles for public transportation was released at the COP25 under this activity. It highlights lessons learned by the country in planning, implementing and managing electric bus fleets as well as creating viable business models through a successful partnership between the private and public sectors.
