

PROJECT SUMMARY

Lebanon

PROJECT NAME

Establishing a Green Investment Facility

The project supports the creation of a Green Investment Facility (LGIF) in Lebanon. The LGIF would be geared at accelerating NDC implementation, focusing on enabling measures that contribute to lowering greenhouse gas emissions and increasing resilience across sectors. Project activities include drafting design documents, bylaws, a results framework and an M&E scheme in consultation with relevant stakeholders. The LGIF's **mandate would be aligned with the government's NDC and sustainable development strategies**. Access to financing for climate-informed projects would be enhanced through grants, soft loans, interest rate subsidies and loan guarantees. Capacity building on MRV and climate finance would also be provided. By boosting cross-sectoral coordination and mainstreaming climate finance, the LGIF is expected to improve the efficiency of utilizing funds.

The takeaways from this project are expected to be informative for replicating similar facilities in other MENA countries. Lebanon is a member of the [NDC Partnership](#) and this support is part of the Climate Action Enhancement Package.
