

PROJECT SUMMARY

Cambodia

PROJECT NAME

Supporting Cambodia to Update NDC with Enhanced Quality and Coverage

GRANT OBJECTIVE AND ACTIVITIES

The project will support the government of Cambodia, a member of the [NDC Partnership](#), to update and enhance its NDC, as well as expanding the sectors covered. In particular, the project will support sectors that did not receive dedicated technical assistance for climate change, including: i) water resources and meteorology, ii) housing, urban planning, and construction, and iii) industry. To accomplish this, the project will assist the government to establish specific and comprehensive NDC targets and actions for mitigation and adaptation. Other key activities include strengthening the capacity of line ministries to participate in the NDC update and increasing their ownership and accountability of its implementation. Additionally, the project will further improve coordination mechanisms amongst government agencies and establish a results monitoring and reporting framework for Cambodia's NDC. This project is being supported through the NDCP Climate Action Enhancement Package (CAEP).
