#### TFP (Growth) Slow Down

Source: BLS+FRED

### Yet Productivity Growth Has Slowed Down

#### (a) TFP & Inventors

Source: Akcigit and Goldschlag (2023)

Data: US Census Bureau

### How to Diagnose the Problem?

Basic growth theory says: More R&D, more dynamism, more growth!

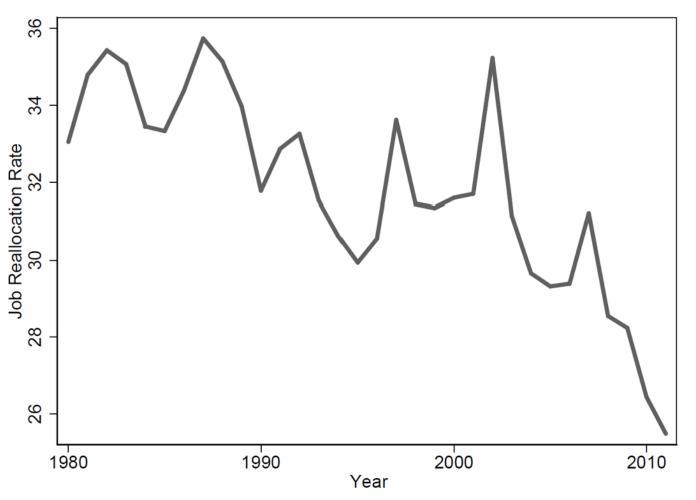

Need to go to micro-level analysis.

• In the US, 50%-75% of growth comes from reallocation!

How does business dynamism look like in the US?

#### Job reallocation has slowed down.

Figure: GROSS JOB REALLOCATION

Source: Decker, Haltiwanger, Jarmin, and Miranda (2016a).

### Job Reallocation Rate

• Why did it slow down? Is it good or bad?

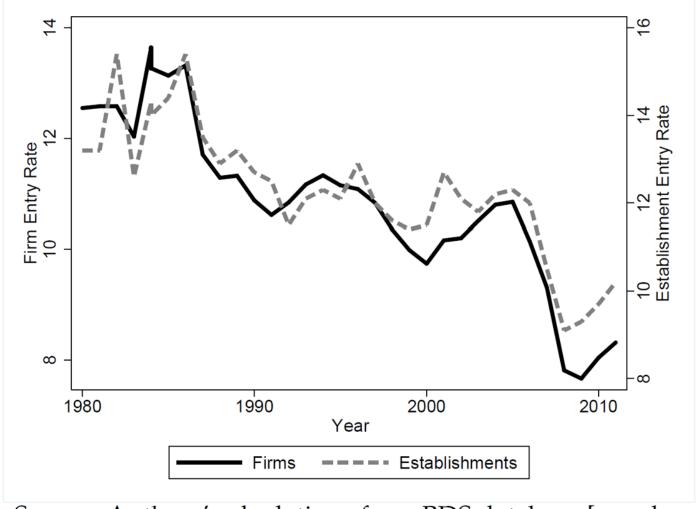

- Reallocation can happen due to:
  - 1) new entry
  - 2) Incumbent expansion

### 10-Step Vital Sign Check!

- 1. Changes in market shares of leaders
- 2. Changes in market power (markups)
- 3. Changes in profits (not same with markups)
- 4. Changes in labor share
- 5. Link between market share and labor share
- 6. Changes in productivity dynamics (are changes driven by productivity?)
- 7. Changes in entry
- 8. Changes in young firm activity
- 9. Changes in job reallocation
- 10. Changes in growth rate distribution

#### Firm entry rate has declined.

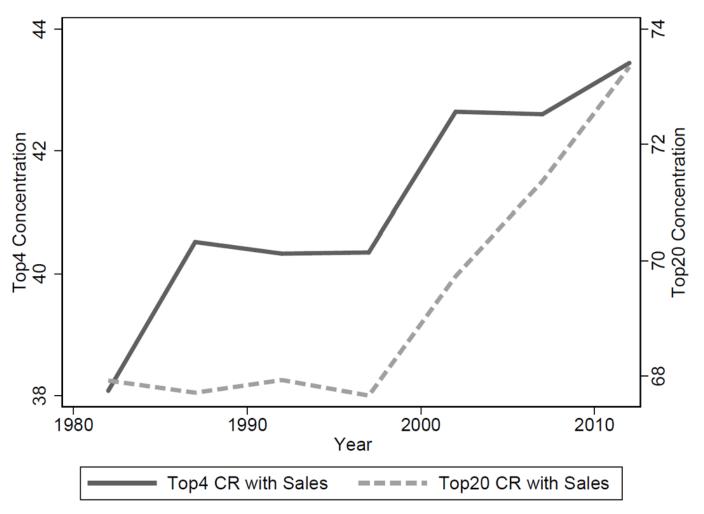

Figure: FIRM AND ESTABLISHMENT ENTRY RATES IN THE UNITED STATES

Source: Authors' calculations from BDS database [see also Decker, Haltiwanger, Jarmin, and Miranda (2016a).

#### Market concentration has risen.

Figure: MARKET CONCENTRATION IN MANUFACTURING

Source: Autor, Dorn, Katz, Patterson, and Van Reenen

#### Productivity gap b/n leaders and followers widened.

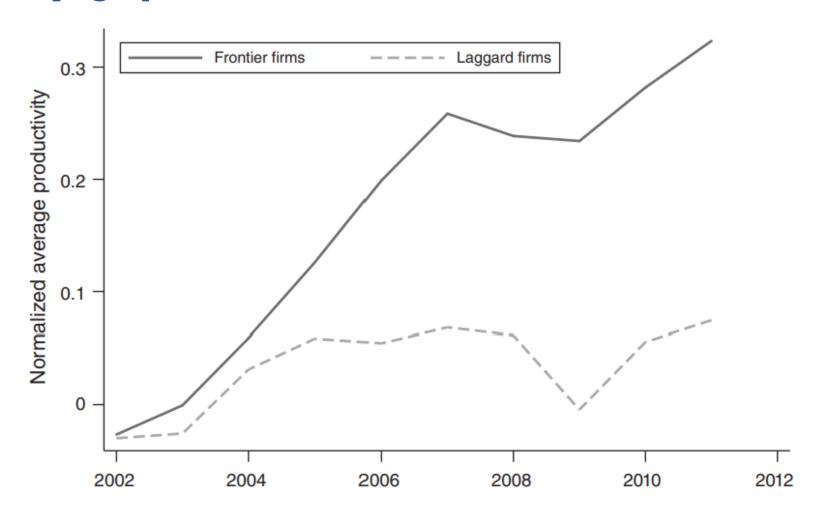

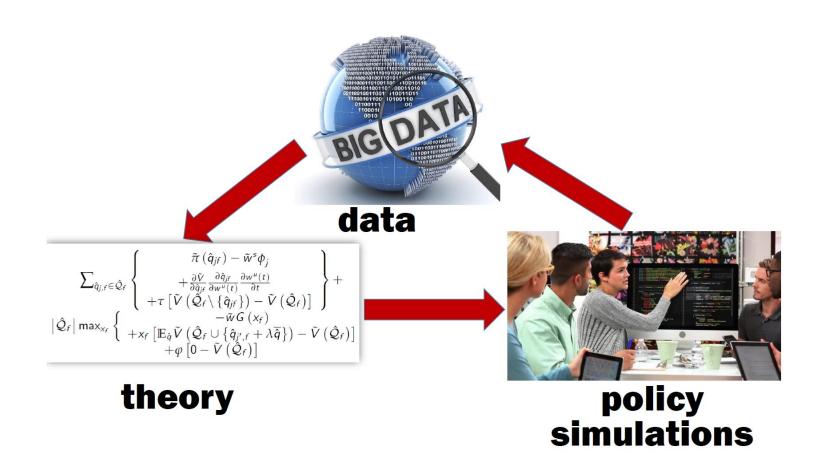

FIGURE 6. LABOR PRODUCTIVITY OF FRONTIER AND LAGGARD FIRMS

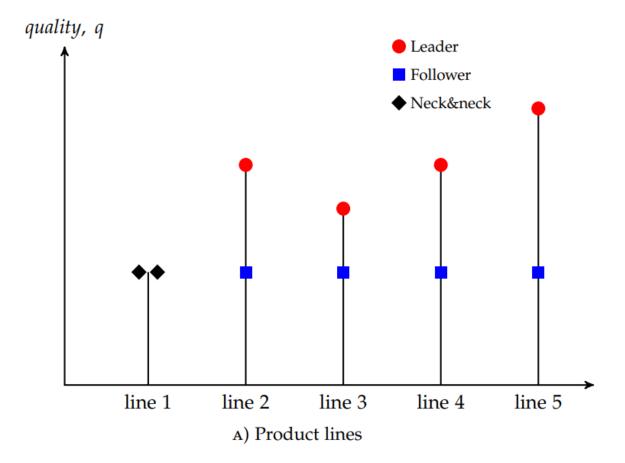

Note: Labor productivity is defined as real value added per worker.

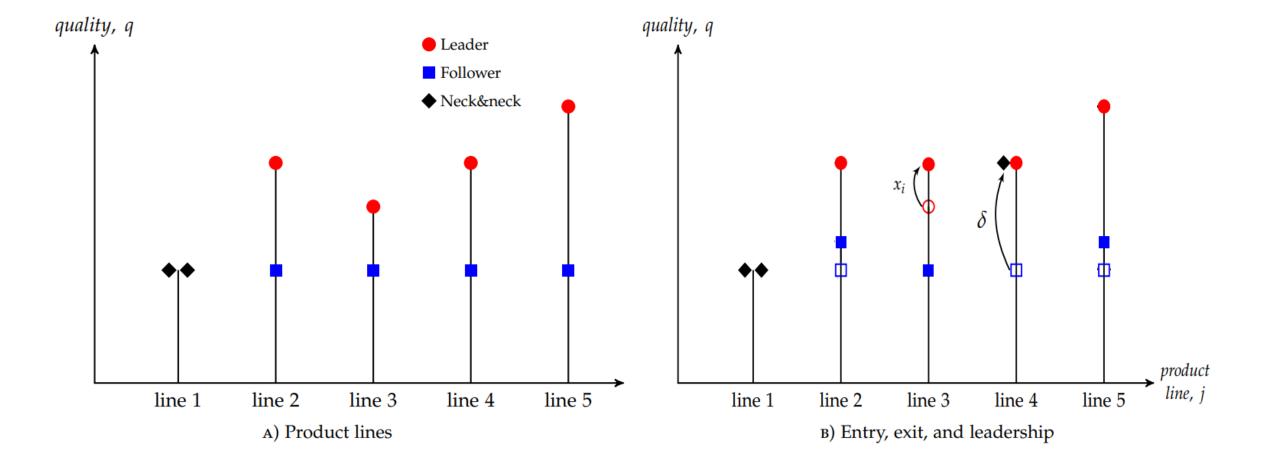

Source: Andrews, Criscuolo, and Gal (2016)

- The US economy has experienced a decline in its business dynamism since 1980:
  - Market concentration has risen.
  - 2. Average markups have increased.
  - 3. Average profits have increased.
  - 4. The labor share of output has gone down.
  - 5. Market concentration and the labor share are negatively associated.
  - 6. The labor productivity gap between frontier and laggard firms has widened.
  - 7. Firm entry rate has declined.
  - 8. The share of young firms in economic activity has declined.
  - 9. Job reallocation has slowed down.
  - 10. The dispersion of firm growth has decreased.

### Need a Dialogue Between Theory and Data

# Diagnosing the Symptoms

Table: Qualitative experiment results

	Data	Lower corporate tax	Higher R&D subsidies	Higher entry cost	Lower knowledge diffusion	Declining interest rate	Ideas getting harder	Weaker worker power
Concentration	$\uparrow$							
Markups	$\uparrow$							
Profit share	$\uparrow$							
Labor share	$\downarrow$							
Frontier vs. laggard gap	$\uparrow$							
Entry	$\downarrow$							
Young firms' empl. share	$\downarrow$							
Gross job reallocation	$\downarrow$							
Dispersion of firm growth	$\downarrow$							

Robust to alternative mechanisms / specifications!

# Diagnosing the Symptoms

Table: Qualitative experiment results

	Data	Lower corporate tax	Higher R&D subsidies	Higher entry cost	Lower knowledge diffusion	Declining interest rate	Ideas getting harder	Weaker worker power
Concentration	<b>↑</b>	$\longleftrightarrow$						
Markups	<b>↑</b>	$\longleftrightarrow$						
Profit share	<b>↑</b>	$\longleftrightarrow$						
Labor share	$\downarrow$	$\longleftrightarrow$						
Frontier vs. laggard gap	<b>↑</b>	$\longleftrightarrow$						
Entry	$\downarrow$	<b>†</b>						
Young firms' empl. share	$\downarrow$	$\longleftrightarrow$						
Gross job reallocation	$\downarrow$	<b>†</b>						
Dispersion of firm growth	<b>↓</b>	$\downarrow$						

Robust to alternative mechanisms / specifications!

### Final Diagnosis of the US Economy

Table: Qualitative experiment results

	Data	Lower corporate tax	Higher R&D subsidies	Higher entry cost	Lower knowledge diffusion	Declining interest rate	Ideas getting harder	Weaker worker power
