

# LANDSCAPE APPROACHES TRAINING SERIES

## Session 1: Overview of Natural Capital Approaches and Tools

Anne Guerry

Chief Strategy Officer & Lead Scientist, Natural Capital Project, Stanford University

 [anne.guerry@stanford.edu](mailto:anne.guerry@stanford.edu)

Anne works to magnify NatCap's impact and ensure achievement of strategic goals, and oversees communications, capacity-building, and convenings for NatCap. She also leads NatCap's Sustainable Livable Cities efforts and co-leads its marine and coastal work. She is fascinated by the relationship between people and nature and believes that cutting-edge science, engagement with leaders of all sorts, software tools, art, poetry, and more can be used to understand and enrich that relationship.

## learning objectives

- Understand and explain the different types of Natural Capital Approaches.
- Understand and apply each of the steps of the Natural Capital Assessment framework.
- Analyze how each of the Natural Capital Approaches can be used to inform policy and financial decisions.

## about our workshop

There is a growing literature on inclusive wealth that utilizes a capitals framing to explore the contribution of different types of capital towards human wellbeing. These include manufacturing, social, natural and human capital. Natural capital stocks result in flows of ecosystem services, and any changes in the value of these ecosystem services lead to a change in benefits to people. This session provides an overview of the Natural Capital Approach (NCA) which includes Natural Capital Assessments and Natural Capital Accounting. Natural Capital Assessments quantify and map stocks of natural capital and flows of ecosystem services to people. Using the Upper Tana Water Fund in Nairobi, Kenya as an example, the session provides an insight into the Natural Capital Assessment process and provides a framework and relevant tools for measurement.

**Keywords:** Natural Capital Approach, ecosystem services, water fund

An aerial photograph of a valley. In the foreground, a river flows through a lush green landscape. To the left, a cluster of houses and buildings is visible, some with red roofs. The background features rolling green hills and mountains under a cloudy sky. A semi-transparent dark green box is overlaid on the upper part of the image, containing white text.

# *Introduction to Natural Capital Approaches*

An aerial photograph of a valley. In the foreground, a river flows through a lush green landscape. To the left, a cluster of houses and buildings is visible, some with red roofs. The background features rolling green hills and mountains under a cloudy sky. A semi-transparent dark green box is overlaid on the middle part of the image, containing white text.

Integrate the values of nature into decisions

A scenic landscape featuring a river in the foreground, lush green vegetation along the banks, and several prominent, forested karst mountains in the background under a cloudy sky. A person is sitting on a small wooden boat on the water.

motivate greater, more targeted investments in nature

A shepherd wearing a hat and a light-colored jacket stands in a grassy field, herding a large flock of sheep. A black and white dog is also present in the field. The background features rolling green hills and dense forests under a bright sky.

improve the well-being of people and nature

# Natural Capital Approaches

## 1. Natural capital assessments

- Quantify and map stocks of natural capital and flows of ecosystem services to people
- Use multiple metrics (qualitative, quantitative, and/or monetary)
- Consider overall as well as distributional effects on people
- Take many forms, including evaluation of past performance, exploration of future scenarios, optimization of decisions, and assessments of policies.

## 2. Natural capital accounts

- Track current stocks of natural capital, flows of ecosystem service benefits and their change over time
- Use a standardized, replicable approach
- Can include both biophysical and monetary metrics

Natural capital approaches inform *policy and finance mechanisms* designed to secure and enhance natural capital and human wellbeing

# Natural Capital Policy and Finance Mechanisms

- Spatial planning and zoning
- Government payments/subsidies
- Regulatory mechanisms
- **Water funds**
- Market-based mechanisms (eco-certification, impact investing, insurance, voluntary carbon offsets, etc.)
- Multilateral and bilateral mechanisms (debt-for-nature swaps, REDD+ funding through Global Climate Fund, etc.)

Natural capital assessments

Natural capital accounts

Natural capital policy and finance mechanisms

Natural capital secured and enhanced for the benefit of people and nature

# A Framework for Natural Capital Assessments

1

BUILD A SOLID FOUNDATION

2

LEVERAGE RESOURCES, COMPILE DATA & INFORMATION

3

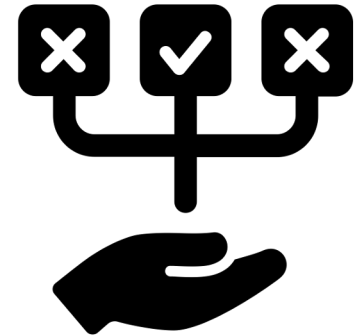

ASK QUESTIONS, EXPLORE OPTIONS

4

ANALYZE & SYNTHESIZE

5

INTERPRET RESULTS & INFORM DECISIONS

EVALUATE & ITERATE

- Development Planning
- Livable Cities
- Securing Freshwater
- Private Sector Standards
- Resilient Coastal Communities

# Upper Tana – Nairobi Water Fund

- Drinking water for 4 million people, 60% of Nairobi's energy
- Problems with soil loss → declining yields, impacts to utilities
- Major stakeholders: KenGen, Nairobi Water
- Objectives: Improve *erosion control* and *dry season baseflow*
- *Our job*: Where to do watershed management? And what's the ROI?

1

BUILD A SOLID  
FOUNDATION

Work together with key stakeholders to establish project goals and co-create a shared vision for the assessment.

## BUILD A SOLID FOUNDATION

- What are the key questions and decisions?
- What are the most important issues?
- What is the geographic area of interest?
- Are the right participants involved?
- Does the team have the right capacity?

# Upper Tana Water Fund

BUILD A SOLID  
FOUNDATION

- What are the key decision questions?

*Is there a business case for creating a water fund?*

- Are we addressing the most important issues?

*Improving drinking water and power supply for Nairobi*

- What is the geographic area of interest?

*3 watersheds providing most of the drinking water/power for Nairobi and supporting major agricultural areas*

# Upper Tana Water Fund

## BUILD A SOLID FOUNDATION

- Are the right participants involved?

*KenGen, Nairobi Water, Green Belt Movement, WRMA, TNC, CIAT, FutureWater, NatCap...*

- Does the team have the right capacity?

*Decision-makers, users, local knowledge and experience, science guidance, data, GIS skills, coordination...*

Stakeholder workshops, field visits, data sharing...

2

LEVERAGE  
RESOURCES,  
COMPILE DATA &  
INFORMATION

Connect with local knowledge,  
leverage key resources--from  
satellite imagery to socioeconomic  
information--to compile data that  
meets project objectives

LEVERAGE  
RESOURCES,  
COMPILE DATA &  
INFORMATION

- Goal: best available
- Partners, government, previous studies...
- Can start with global datasets
- Cite your sources as you go along

# Upper Tana Water Fund

LEVERAGE  
RESOURCES,  
COMPILE DATA &  
INFORMATION

- Mix of local and global data
- FutureWater provided many GIS layers
- TNC created land cover map
- Literature search for some values
- Valuation data from utilities

description	sed_exp	sed_ret	rough_rank	cover_rank
Urban and paved roads	0.99	0.2	0.011	0.1
Bare soil and unpaved roads	1	0.26	0.02	0.16
Grass	0.034	0.845	0.13	0.3
Shrub	0.128	0.505	0.4	0.5
General agriculture	0.412	0.84	0.09	0.39
Tea	0.08135	0.84	0.3535	0.883
Coffee	0.4393	0.84	0.276	0.45
Mixed forest	0.025	0.7375	0.6	0.91

3

ASK QUESTIONS,  
EXPLORE OPTIONS

Explore possibilities for different decisions and locations where investments in nature could have the biggest impact

# Upper Tana Water Fund

ASK QUESTIONS,  
EXPLORE OPTIONS

## Management Activities:

- Agroforestry
- Grass strips
- Terracing
- Riparian management

3 Watersheds  
4 Budget levels

ANALYZE &  
SYNTHESIZE

Using InVEST software or other modeling tools, map how investments or policies will impact ecosystems and human wellbeing

ANALYZE &  
SYNTHESIZE

- Quantify ES supply
- Determine who benefits
- Visualize changes across the landscape
- Many tools available, from simple to complex

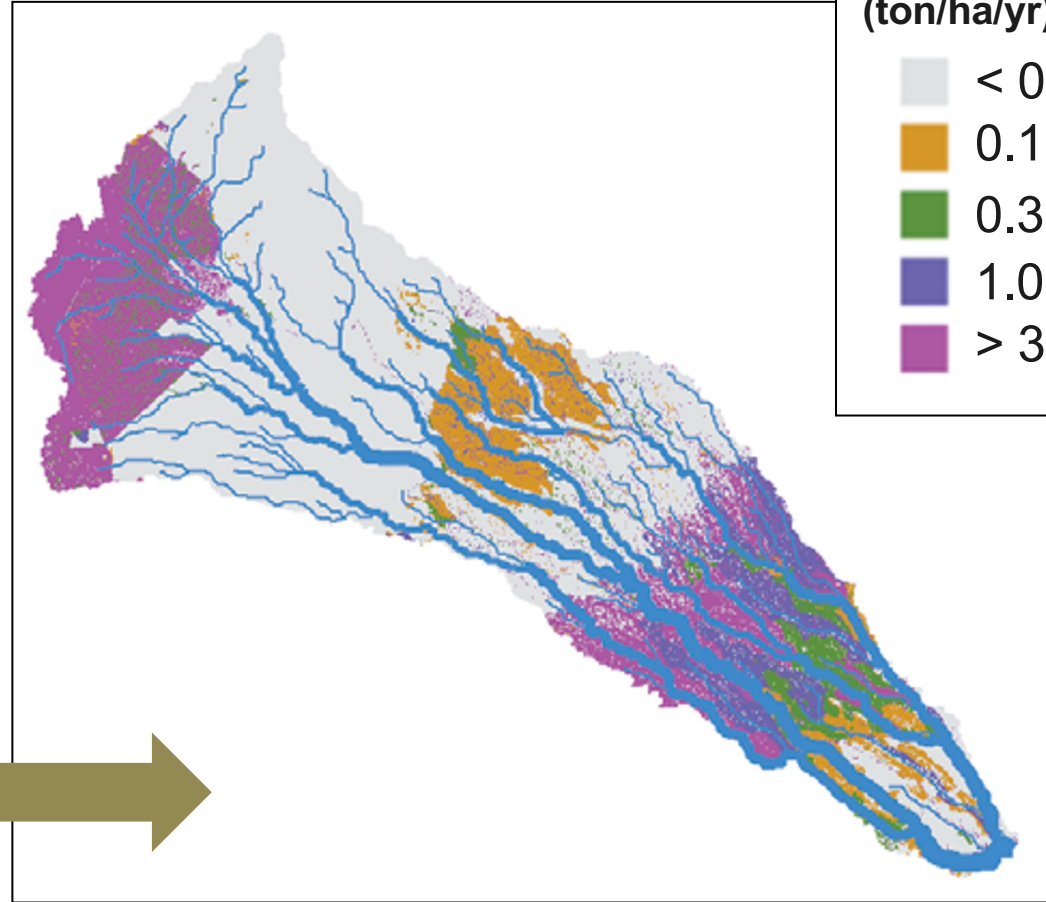

# Upper Tana Water Fund

ANALYZE &  
SYNTHESIZE

**SWAT** Soil & Water Assessment Tool

Erosion reduction  
(ton/ha/yr)

- < 0.1
- 0.1 - .03
- 0.3 - 1.0
- 1.0 - 3.0
- > 3.0

# Upper Tana Water Fund

ANALYZE &  
SYNTHESIZE

Erosion  
reduction  
(ton/ha/yr)

- < 0.1
- 0.1 - .03
- 0.3 - 1.0
- 1.0 - 3.0
- > 3.0

- Annual benefit
- Annual cost
- Net annual benefit

Benefits to *Farmers + Nairobi Water + KenGen*  
\$10M investment → \$21M economic benefits

5

INTERPRET RESULTS  
& INFORM  
DECISIONS

Integrated teams review results, incorporate new information to improve accuracy, identify policy and investment implications

## INTERPRET RESULTS & INFORM DECISIONS

- Visualize results
- Compare scenarios
- Consider tradeoffs
- Tailored to audience

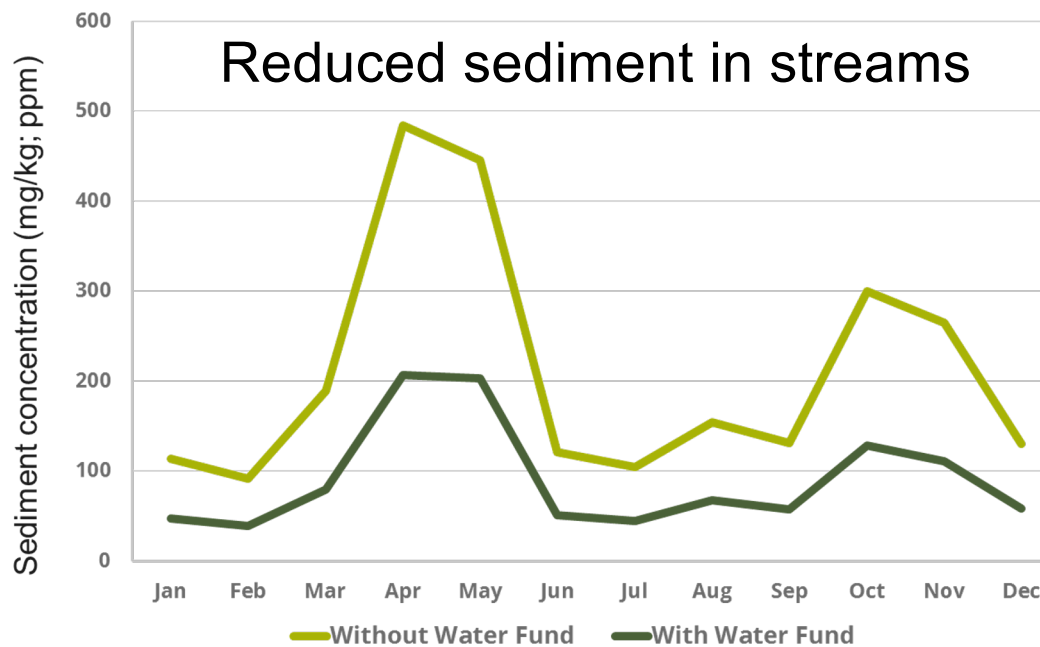

# Upper Tana Water Fund

INTERPRET RESULTS  
& INFORM  
DECISIONS

*Useful for  
utilities*

## Reduced sediment by landcover type

(In thousand tons)	Degraded land	Coffee	General agriculture	Tea	Unpaved road	Total
Sagana-Gura	-3	-55	-131	-3	-20	-212
Maragua	-142	-100	-54	-1	-100	-399
Thika-Chania	-54	-81	-179	-1	-127	-442

*Useful for  
farmers*

EVALUATE &  
ITERATE

Do these results make sense based on mutual understanding? What worked? What can we improve? What changes will lead to desired improvements?

# Upper Tana Water Fund

EVALUATE &  
ITERATE

Several iterations based on stakeholder and partner feedback

- Cost information from stakeholders
- Refinements to activities and land cover from talking with locals

# Upper Tana Water Fund

EVALUATE &  
ITERATE

Tools/methods training in  
Nairobi

**Upper Tana-Nairobi Water Fund**  
A Business Case

*Launched*
