

The World Bank in Federated States of Micronesia (FSM)

The World Bank's support to the Federated States of Micronesia (FSM) is focused on developing the digital economy of FSM and improving maritime and road transport. The World Bank is also supporting the government to scale up renewable energy, increase energy access, and strengthen public financial management.

- Digital Development
- Energy & Extractives
- Governance
- Jobs
- Transport

Digital Development

Through the Pacific Regional Connectivity Program, FSM is being connected to faster, cheaper and more reliable internet. World Bank support is helping to connect FSM islands to broadband, establish the foundations for digital government services, and strengthen the regulatory environment for the digital economy.

The Digital Federated States of Micronesia Project will connect outer islands to basic broadband services, establish the foundations for digital government services, and strengthen a legal and regulatory environment that will enable FSM's digital economy to thrive.

Transport

The World Bank's largest investments in the future of FSM are in the transport sector. The FSM Maritime Investment Project is improving the safety, efficiency and climate resilience of maritime infrastructure and operations across the country.

On land, the FSM Prioritized Road Investment and Management Project is helping to ensure the country's primary road network is more resilient to the impacts of climate change while a complimentary climate focused road enhancement project works to improve secondary roads across the country.

Current Projects

As of the 1 July 2022 there are **8 active projects.**

- Digital FSM Project
- FSM Connectivity Project
- FSM Maritime Investment Project
- FSM Prioritized Road Investment and Management Enhancements Project
- Pacific Islands Regional Oceanscape Program
- Project for Strengthening Public Financial Management
- Sustainable Energy Development & Access Project 2

* based on FY23 (1 July 2022) data.

Energy & Extractives

Through the Sustainable Energy Development & Access Project, the World Bank is working to improve the reliability of electricity supply, expand access to electricity, and scale up renewable energy generation in FSM.
