

PROJECT SUMMARY

Burkina Faso

PROJECT NAME

Streamlining MRV for GHG emissions across sectors

GRANT OBJECTIVE AND ACTIVITIES

The project will support the government of Burkina Faso, a member of the [NDC Partnership](#), to improve its institutional framework to foster private investment in GHG mitigating activities and meet the country's NDC targets. The project will have three main components. First, it will set-up a crediting framework to facilitate the creation of carbon credits in Burkina Faso, including a central registry of carbon operations and accounting rules. Additionally, the project will improve the MRV system to oversee all Agriculture, Forestry, and Other Land Use (AFLOU) operations through a single system that also covers REDD+ and Climate Smart Agriculture operations. Finally, the project will assist Burkina Faso to build capacity and knowledge for participating in international negotiations, especially those pertaining to Article 6 of the Paris Agreement.
