

GUATEMALA

Region: Latin America & Caribbean
Income Category: Upper-middle Income

Human capital - people’s knowledge, skills, and health - drives productivity and growth. The Human Capital Index Plus (HCI+) measures the human capital a child born today can expect to accumulate over their working life, extending the original HCI by incorporating tertiary education and work experience. This brief summarizes **Guatemala’s** HCI+ score and its performance in building human capital.

What is Guatemala’s HCI+ and what does it mean?

Guatemala’s HCI+ score is 139 (out of a maximum of 325), reflecting its investments in health, education, and employment. A 10-point increase in the index would translate into approximately 10 percent higher future income. Closing the current gaps in these areas relative to high-performing countries with similar GDP per capita would boost future income by 117%.

How does Guatemala’s HCI+ compare to other countries?

Guatemala’s HCI+ is lower than the average for the **Latin America & Caribbean region (194)** and lower than the average for **upper-middle-income countries (204)**.

Guatemala’s HCI+ score is also **109 points lower than the OECD average.**

What explains Guatemala’s HCI+?

The HCI+ has three components corresponding to health, education, and employment.

The HCI+ score for the **Health pillar is 37**, lower than the **regional average of 44**.

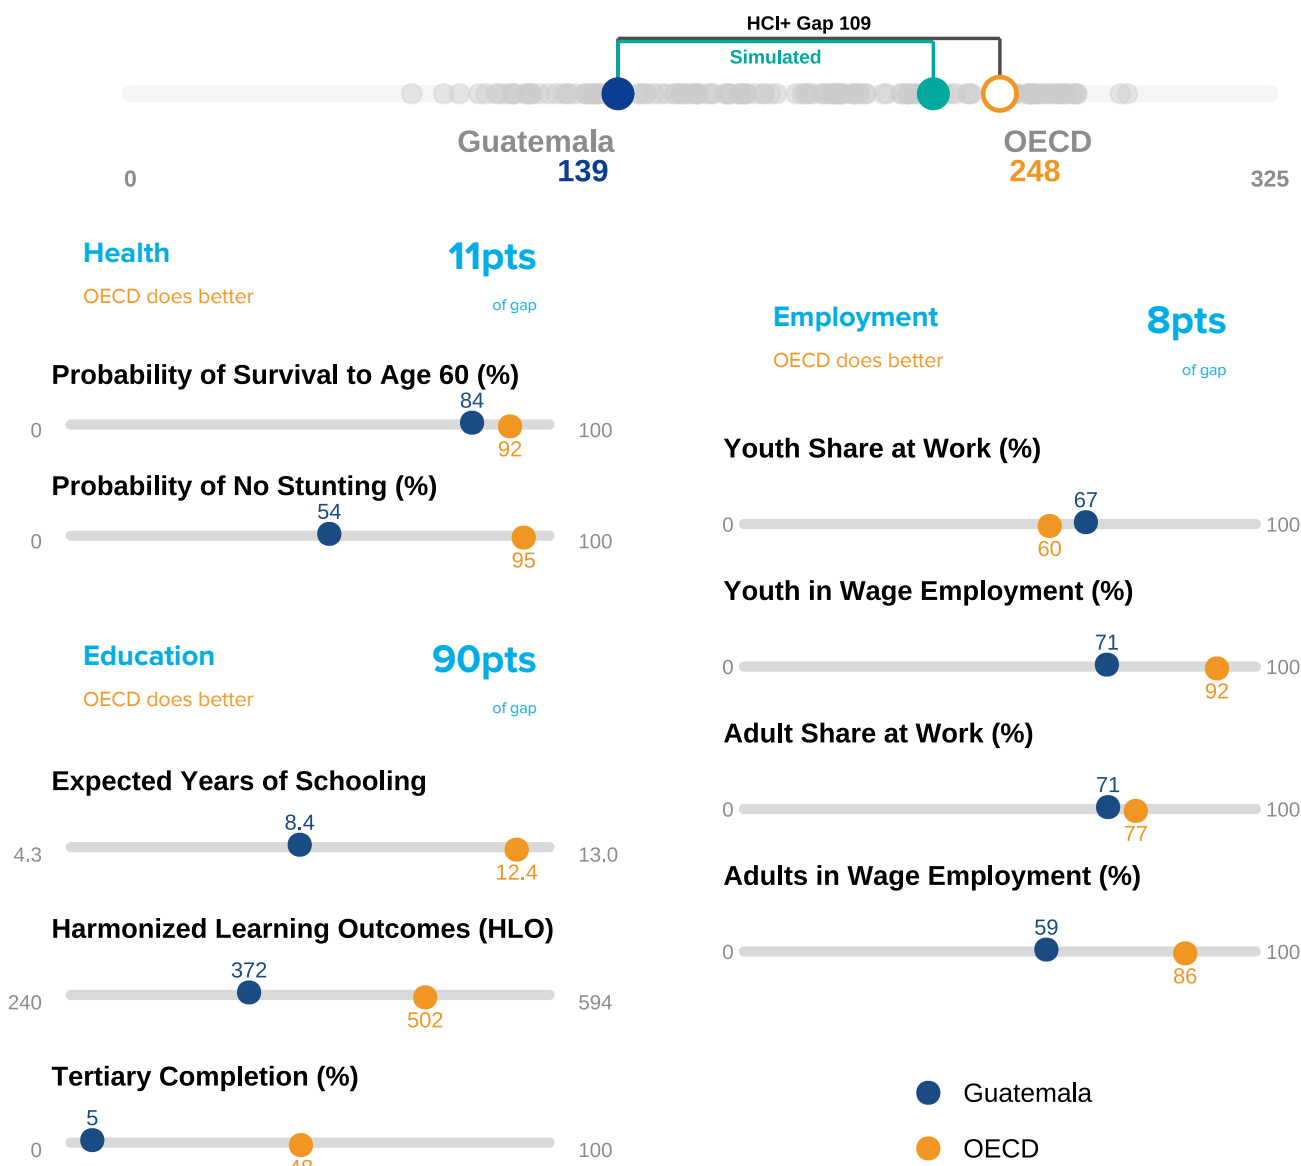

The HCI+ score for the **Education pillar is 63**, lower than the **regional average of 109**.

The HCI+ score for the **Employment pillar is 39**, slightly lower than the **regional average of 42**.

What indicators are responsible for Guatemala's HCI+ gap with OECD?

Guatemala's HCI+ score (139) is lower than the OECD average (248). The indicators that account for the largest share of the HCI+ gap between Guatemala and the OECD are **expected years of schooling, tertiary completion, and Harmonized Learning Outcomes (HLO)**. Raising these indicators to OECD levels would increase Guatemala's score to 229, boosting future income by approximately 89.5%.

What is Guatemala's HCI+ gender gap?

The HCI+ score for **women in Guatemala is 124** compared to **160 for men**. The 36-point gap indicates that women's earning potential will be 36% lower than men's due to differences in the human capital acquired by men and women in Guatemala.

Note: All values are derived from internationally comparable public datasets.
