

PROJECT SUMMARY

Jamaica

PROJECT NAME

Assessment and Update of the Nationally Determined Contribution (NDC) and NDC Partnership Plan Development

GRANT OBJECTIVE AND ACTIVITIES

The project supports the Government of Jamaica in assessing and updating its Nationally Determined Contribution (NDC), reflecting enhanced ambition and economy-wide targets. A member of the [NDC Partnership](#), Jamaica is developing an NDC Partnership Plan with the World Bank's support. The Plan will function as an NDC implementation roadmap to achieve low carbon development and enhance climate resilience. Given Jamaica's ambition to expand the coverage of its NDC beyond the energy sector, the project is facilitating cross-sectoral collaboration and building capacity to review the country's NDC and identify additional sectors to be included. Additionally, the project is helping to identify financing sources and opportunities for private sector engagement in implementing adaptation strategies and developing investment pipelines. The project's technical support includes modeling exercises and analytics to determine emission reduction opportunities and further understand possible costs and impacts of policy instruments. Furthermore, knowledge events such as peer exchanges will be organized to ensure that Jamaica's experience and best practices are shared regionally and globally.
