Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Ethiopia in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in Ethiopia will be 38% as productive when she grows up as she could be if she enjoyed complete education and full health.

This is lower than the average for the Sub-Saharan Africa region (40%) but higher than for Low Income countries (37%).

THE HUMAN CAPITAL INDEX COMPONENTS

- **Probability of Survival to Age 5.** Of every 100 children born in Ethiopia, 94 survive to age 5.

- **Expected Years of School.** In Ethiopia, a child who starts school at age 4 can expect to complete 7.8 years of school by her 18th birthday.

- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 4.3 years.

- **Average Harmonized Test Scores.** Students in Ethiopia score 348 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Adult Survival Rate.** Across Ethiopia, 79% of 15-year-olds survive until age 60.

- **Fraction of Children Under 5 Not Stunted.** Approximately 63 out of 100 children are not stunted. This means that 37 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for Ethiopia. The regional average for this indicator is 0.24 and the income group average is 0.18.

HCI AND COMPONENTS

- **Latest Available Data for Ethiopia**
- **Average for Sub-Saharan Africa**
- **Average for Low Income countries**

### Human Capital Index

- Probability of Survival to Age 5 (%)
- Expected Years of School
- Learning-Adjusted Years of School
- Average Harmonized Test Scores
- Survival Rate from Age 15-60 (%)
- Fraction of Children Under 5 Not Stunted (%)

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Neonatal mortality rate.** The neonatal mortality rate is 26 per 1,000 live births (2021), compared to 31 in 2016. The indicator is higher than the regional average.
- **Minimum meal frequency.** The share of children ages 0-23 months who regularly consume an age-appropriate meal is 55% (2019), compared to 43% in 2016. The indicator is above the regional average.
- **Participation rate in organized learning.** In 2020, 43% of children who were one year younger than the official primary school entry age participated in an organized learning program, compared to 37% in 2015. The indicator is lower than the regional average.

**SCHOOL AGE**

- **Child mortality rate.** The mortality rate for children ages 5-14 is 7 per 1,000 children aged 5 (2021), compared to 10 in 2016. The indicator is lower than the regional average.
- **Primary school completion rate.** The primary school completion rate at the official entrance age of the last grade of that level is 67% (2021), compared to 62% in 2016. The indicator is below the regional average.
- **Over-age primary students.** The percentage of primary school students who are older than their typical age for their respective school level is 19% (2021), compared to 22% in 2015. The indicator is lower than the regional average.

**YOUTH**

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 69 (2021), compared to 74 in 2016. The indicator is lower than the regional average.
- **Upper secondary school completion rate.** The upper-secondary completion rate at ages 3-5 years above the intended age for the last grade of that level is 14% (2020), compared to 12% in 2015. The indicator is below the regional average.
- **Gross school enrollment rate, tertiary.** Tertiary school enrollment as a percentage of people ages 18-24 is 10% (2018). This remains unchanged since 2015. The indicator is lower than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 65 years (2021), compared to 64 in 2016. The indicator is higher than the regional average.
- **Probability of dying from NCDs.** The probability of dying from non-communicable diseases between the ages of 30 to 70 is 43% (2019), compared to 38% in 2015. The indicator is above the regional average.
- **Health care facilities with basic sanitation services.** The share of health care facilities with sanitation facilities is 59% (2020). This remains unchanged since 2015. The indicator is higher than the regional average.
