Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Kenya in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in Kenya will be 55% as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for the Sub-Saharan Africa region (40%) and Lower Middle Income countries (48%).

THE HUMAN CAPITAL INDEX COMPONENTS

- **Probability of Survival to Age 5.** Of every 100 children born in Kenya, 96 survive to age 5.

- **Expected Years of School.** In Kenya, a child who starts school at age 4 can expect to complete 11.6 years of school by her 18th birthday.

- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 8.5 years.

- **Average Harmonized Test Scores.** Students in Kenya score 455 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Adult Survival Rate.** Across Kenya, 77% of 15-year-olds survive until age 60.

- **Fraction of Children Under 5 Not Stunted.** Approximately 74 out of 100 children are not stunted. This means that 26 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for Kenya. The regional average for this indicator is 0.24 and the income group average is 0.27.

HUMAN CAPITAL PROJECT

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Neonatal mortality rate.** The neonatal mortality rate is 18 per 1,000 live births (2021), compared to 21 in 2016. The indicator is lower than the regional average.

- **DTP vaccination rate, third dose.** In 2022, 90% of infants received the third dose of the diphtheria, tetanus, and pertussis vaccine, compared to 82% in 2017. The indicator is above the regional average.

- **Pre-primary school gross enrollment ratio.** The pre-primary school gross enrollment ratio at the age group that officially correspond to that level of education is 65% (2019), compared to 75% in 2015. The indicator is higher than the regional average.

**SCHOOL AGE**

- **Child mortality rate.** The mortality rate for children ages 5-14 is 9 per 1,000 children aged 5 (2021), compared to 10 in 2016. The indicator is lower than the regional average.

- **Children engaged in child labor.** The share of children (ages 5-17) who are engaged in economic activities is 19% (2019). The indicator is above the regional average.

- **Minimum proficiency in reading, primary.** In 2021, 47% of children who completed primary school achieved the minimum learning outcomes in reading. The indicator is higher than the regional average.

**YOUTH**

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 89% (2021). The indicator is higher than the regional average.

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 64 (2021), compared to 77 in 2016. The indicator is below the regional average.

- **Youth not in employment, education or training.** In 2019, 20% of youth (ages 15-24) were not in employment, education or training, compared to 14% in 2016. The indicator is lower than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 61 years (2021), compared to 62 in 2016. The indicator is lower than the regional average.

- **Female labor force participation rate.** Female labor force participation as a percentage of the female working-age population (ages 25+) is 85% (2022), compared to 84% in 2017. The indicator is above the regional average.

- **Adult unemployment rate.** Unemployed adults as a share of the adult labor force (ages +25) is 4% (2022), compared to 2% in 2017. The indicator is lower than the regional average.

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
