Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Liberia in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

**THE HUMAN CAPITAL INDEX**

A child born in Liberia will be 32% as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for the Sub-Saharan Africa region (40%) and Low Income countries (37%).

**THE HUMAN CAPITAL INDEX COMPONENTS**

- **Probability of Survival to Age 5.** Of every 100 children born in Liberia, 93 survive to age 5.
- **Expected Years of School.** In Liberia, a child who starts school at age 4 can expect to complete 4.2 years of school by her 18th birthday.
- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 2.2 years.
- **Average Harmonized Test Scores.** Students in Liberia score 332 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Adult Survival Rate.** Across Liberia, 78% of 15-year-olds survive until age 60.
- **Fraction of Children Under 5 Not Stunted.** Approximately 70 out of 100 children are not stunted. This means that 30 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

**UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX**

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for Liberia. The regional average for this indicator is 0.24 and the income group average is 0.18.

**HCI AND COMPONENTS**

- Latest Available Data for Liberia
- Average for Sub-Saharan Africa
- Average for Low Income countries

- **Human Capital Index**
  - Liberia: 0.32
  - Average for Sub-Saharan Africa: 0.93
  - Average for Low Income countries: 0.88

- **Probability of Survival to Age 5 (%)**
  - Liberia: 93

- **Expected Years of School**
  - Liberia: 4.2

- **Learning-Adjusted Years of School**
  - Liberia: 2.2

- **Average Harmonized Test Scores**
  - Liberia: 332
  - Average: 625

- **Survival Rate from Age 15-60 (%)**
  - Liberia: 78

- **Fraction of Children Under 5 Not Stunted (%)**
  - Liberia: 70

**U-HCI**

- Liberia: 0.32

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Neonatal mortality rate.** The neonatal mortality rate is 30 per 1,000 live births (2021), compared to 32 in 2016. The indicator is higher than the regional average.

- **Minimum meal frequency.** The share of children ages 0-23 months who regularly consume an age-appropriate meal is 22% (2019). The indicator is below the regional average.

- **Pre-primary school gross enrollment ratio.** The pre-primary school gross enrollment ratio at the age group that officially correspond to that level of education is 128% (2020), compared to 158% in 2015. The indicator is higher than the regional average.

**SCHOOLAGE**

- **Child mortality rate.** The mortality rate for children ages 5-14 is 17 per 1,000 children aged 5 (2021), compared to 18 in 2016. The indicator is higher than the regional average.

- **Children engaged in child labor.** The share of children (ages 5-17) who are engaged in economic activities is 21% (2020). The indicator is above the regional average.

- **Net school enrollment rate, lower secondary.** The percentage of lower secondary school-aged children enrolled at that level is 64% (2020). The indicator is lower than the regional average.

**YOUTH**

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 123 (2021), compared to 137 in 2016. The indicator is higher than the regional average.

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 77% (2019), compared to 55% in 2017. The indicator is below the regional average.

- **Youth unemployment rate.** Unemployed youth as a share of the youth labor force (ages 15-24) is 3% (2022), compared to 2% in 2017. The indicator is lower than the regional average.

**ADULTS & ELDERLY**

- **Female labor force participation rate.** Female labor force participation as a percentage of the female working-age population (ages 25+) is 80% (2022), compared to 79% in 2017. The indicator is higher than the regional average.

- **Life expectancy at birth.** Life expectancy at birth is 61 years (2021), compared to 60 in 2016. The indicator is below the regional average.

- **Adult unemployment rate.** Unemployed adults as a share of the adult labor force (ages +25) is 4% (2022), compared to 3% in 2017. The indicator is lower than the regional average.

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
