Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by St. Lucia in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in St. Lucia will be 60% as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for the Latin America & Caribbean region (56%) and Upper Middle Income countries (56%).

THE HUMAN CAPITAL INDEX COMPONENTS

- **Probability of Survival to Age 5.** Of every 100 children born in St. Lucia, 98 survive to age 5.
- **Expected Years of School.** In St. Lucia, a child who starts school at age 4 can expect to complete 12.7 years of school by her 18th birthday.
- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 8.5 years.
- **Average Harmonized Test Scores.** Students in St. Lucia score 418 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Adult Survival Rate.** Across St. Lucia, 87% of 15-year-olds survive until age 60.
- **Fraction of Children Under 5 Not Stunted.** Approximately 98 out of 100 children are not stunted. This means that 2 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for St. Lucia. The regional average for this indicator is 0.36 and the income group average is 0.33.

The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Neonatal mortality rate.** The neonatal mortality rate is 13 per 1,000 live births (2021), compared to 12 in 2016. The indicator is higher than the regional average.

- **Participation rate in organized learning.** In 2020, 99% of children who were one year younger than the official primary school entry age participated in an organized learning program, compared to 94% in 2015. The indicator is above the regional average.

- **DTP vaccination rate, third dose.** In 2022, 81% of infants received the third dose of the diphtheria, tetanus and pertussis vaccine, compared to 80% in 2017. The indicator is lower than the regional average.

**SCHOOL AGE**

- **Child mortality rate.** The mortality rate for children ages 5-14 is 3 per 1,000 children aged 5 (2021). This remains unchanged since 2016. The indicator is similar to the regional average.

- **Primary school completion rate.** The primary school completion rate at the official entrance age of the last grade of that level is 100% (2020), compared to 84% in 2015. The indicator is similar to the regional average.

- **Net school enrollment rate, lower secondary.** The percentage of lower secondary school-aged children enrolled at that level is 91% (2020), compared to 88% in 2016. The indicator is similar to the regional average.

**YOUTH**

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 37 (2021), compared to 39 in 2016. The indicator is lower than the regional average.

- **Gross school enrollment rate, tertiary.** Tertiary school enrollment as a percentage of people ages 18-24 is 16% (2020). This remains unchanged since 2015. The indicator is below the regional average.

- **Qualified teachers in secondary education.** The share of secondary school teachers who are qualified is 98% (2019), compared to 100% in 2017. The indicator is higher than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 71 years (2021), compared to 73 in 2016. The indicator is lower than the regional average.

- **Probability of dying from NCDs.** The probability of dying from non-communicable diseases between the ages of 30 to 70 is 82% (2019). This remains unchanged since 2015. The indicator is above the regional average.

- **Prevalence of hypertension.** The prevalence of hypertension among people ages 30-79 is 40% (2019). This remains unchanged since 2015. The indicator is similar to the regional average.

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
