Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by El Salvador in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in El Salvador will be 55% as productive when she grows up as she could be if she enjoyed complete education and full health. This is slightly lower than the average for the Latin America & Caribbean region (56%) and lower than for Upper Middle Income countries (56%).

THE HUMAN CAPITAL INDEX COMPONENTS

- **Probability of Survival to Age 5.** Of every 100 children born in El Salvador, 99 survive to age 5.

- **Expected Years of School.** In El Salvador, a child who starts school at age 4 can expect to complete 10.9 years of school by her 18th birthday.

- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 7.6 years.

- **Average Harmonized Test Scores.** Students in El Salvador score 436 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Adult Survival Rate.** Across El Salvador, 82% of 15-year-olds survive until age 60.

- **Fraction of Children Under 5 Not Stunted.** Approximately 86 out of 100 children are not stunted. This means that 14 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The U-HCI for El Salvador is 0.34. Thus, children born today will be 34% as productive in adulthood as they could have been if they had access to full health and education, and they became fully employed adults. The U-HCI for girls is even lower at 0.27.

Note: - represents no internationally comparable data available.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Children who are developmentally on track.** In 2021, 83% of children (ages 24-59 months) were developmentally on track in health, learning, and psychosocial well-being. The indicator is lower than the regional average.

- **Neonatal mortality rate.** The neonatal mortality rate is 6 per 1,000 live births (2021), compared to 7 in 2016. The indicator is below the regional average.

- **DTP vaccination rate, third dose.** In 2022, 75% of infants received the third dose of the diphtheria, tetanus and pertussis vaccine, compared to 92% in 2017. The indicator is lower than the regional average.

**SCHOOLAGE**

- **Children engaged in child labor.** The share of children (ages 5-17) who are engaged in economic activities is 4% (2020). The indicator is lower than the regional average.

- **Child mortality rate.** The mortality rate for children ages 5-14 is 4 per 1,000 children aged 5 (2021), compared to 3 in 2016. The indicator is above the regional average.

- **Lower secondary school completion rate.** The lower secondary school completion rate at the official entrance age of the last grade of that level is 71% (2019), compared to 83% in 2015. The indicator is lower than the regional average.

**YOUTH**

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 99% (2020), compared to 98% in 2015. The indicator is higher than the regional average.

- **Youth not in employment, education or training.** In 2022, 24% of youth (ages 15-24) were not in employment, education or training, compared to 28% in 2017. The indicator is above the regional average.

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 56 (2021), compared to 65 in 2016. The indicator is higher than the regional average.

**ADULTS & ELDERLY**

- **Female labor force participation rate.** Female labor force participation as a percentage of the female working-age population (ages 25+) is 49% (2022), compared to 50% in 2017. The indicator is lower than the regional average.

- **Life expectancy at birth.** Life expectancy at birth is 71 years (2021), compared to 72 in 2016. The indicator is below the regional average.

- **Adult unemployment rate.** Unemployed adults as a share of the adult labor force (ages +25) is 3% (2022). This remains unchanged since 2017. The indicator is lower than the regional average.
