Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Chad in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in Chad will be 30% as productive when she grows up as she could be if she enjoyed complete education and full health.

This is lower than the average for the Sub-Saharan Africa region (40%) and Low Income countries (37%).

THE HUMAN CAPITAL INDEX COMPONENTS

- **Probability of Survival to Age 5.** Of every 100 children born in Chad, 88 survive to age 5.

- **Expected Years of School.** In Chad, a child who starts school at age 4 can expect to complete 5.3 years of school by her 18th birthday.

- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 2.8 years.

- **Average Harmonized Test Scores.** Students in Chad score 333 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Adult Survival Rate.** Across Chad, 65% of 15-year-olds survive until age 60.

- **Fraction of Children Under 5 Not Stunted.** Approximately 60 out of 100 children are not stunted. This means that 40 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for Chad. The regional average for this indicator is 0.24 and the income group average is 0.18.

Note: - represents no internationally comparable data available.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Neonatal mortality rate.** The neonatal mortality rate is 32 per 1,000 live births (2021), compared to 35 in 2016. The indicator is higher than the regional average.

- **Children who are developmentally on track.** In 2019, 45% of children (ages 24-59 months) were developmentally on track in health, learning and psychosocial well-being. The indicator is below the regional average.

- **Minimum meal frequency.** The share of children ages 0-23 months who regularly consume an age-appropriate meal is 34% (2019), compared to 37% in 2015. The indicator is lower than the regional average.

**SCHOOLAGE**

- **Children engaged in child labor.** The share of children (ages 5-17) who are engaged in economic activities is 31% (2019). The indicator is higher than the regional average.

- **Child mortality rate.** The mortality rate for children ages 5-14 is 23 per 1,000 children aged 5 (2021), compared to 26 in 2016. The indicator is above the regional average.

- **Primary school completion rate.** The primary school completion rate at the official entrance age of the last grade of that level is 45% (2021), compared to 41% in 2016. The indicator is lower than the regional average.

**YOUTH**

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 35% (2021), compared to 31% in 2016. The indicator is lower than the regional average.

- **Youth not in employment, education or training.** In 2018, 37% of youth (ages 15-24) were not in employment, education or training. The indicator is above the regional average.

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 138 (2021), compared to 155 in 2016. The indicator is higher than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 53 years (2021), compared to 52 in 2016. The indicator is lower than the regional average.

- **Female labor force participation rate.** Female labor force participation as a percentage of the female working-age population (ages 25+) is 56% (2022), compared to 57% in 2017. The indicator is below the regional average.

- **Adult unemployment rate.** Unemployed adults as a share of the adult labor force (ages +25) is 1% (2022). This remains unchanged since 2017. The indicator is lower than the regional average.

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
