Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Tunisia in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

**THE HUMAN CAPITAL INDEX**

A child born in Tunisia will be 52% as productive when she grows up as she could be if she enjoyed complete education and full health.

This is lower than the average for the Middle East & North Africa region (57%) but higher than for Lower Middle Income countries (48%).

**THE HUMAN CAPITAL INDEX COMPONENTS**

- **Probability of Survival to Age 5.** Of every 100 children born in Tunisia, 98 survive to age 5.

- **Expected Years of School.** In Tunisia, a child who starts school at age 4 can expect to complete 10.6 years of school by her 18th birthday.

- **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 6.5 years.

- **Average Harmonized Test Scores.** Students in Tunisia score 384 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

- **Adult Survival Rate.** Across Tunisia, 91% of 15-year-olds survive until age 60.

- **Fraction of Children Under 5 Not Stunted.** Approximately 92 out of 100 children are not stunted. This means that 8 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

**UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX**

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for Tunisia. The regional average for this indicator is 0.34 and the income group average is 0.27.

The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Children who are developmentally on track.** In 2018, 82% of children (ages 24-59 months) were developmentally on track in health, learning and psychosocial well-being. The indicator is higher than the regional average.

- **Neonatal mortality rate.** The neonatal mortality rate is 12 per 1,000 live births (2021). This remains unchanged since 2016. The indicator is above the regional average.

- **Minimum meal frequency.** The share of children ages 0-23 months who regularly consume an age-appropriate meal is 85% (2018). The indicator is higher than the regional average.

**SCHOOLAGE**

- **Child mortality rate.** The mortality rate for children ages 5-14 is 3 per 1,000 children aged 5 (2021). This remains unchanged since 2016. The indicator is similar to the regional average.

- **Primary school completion rate.** The primary school completion rate at the official entrance age of the last grade of that level is 105% (2021), compared to 99% in 2016. The indicator is above the regional average.

- **Lower secondary school completion rate.** The lower secondary school completion rate at the official entrance age of the last grade of that level is 88% (2021), compared to 71% in 2015. The indicator is similar to the regional average.

**YOUTH**

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 98% (2021), compared to 95% in 2018. The indicator is higher than the regional average.

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 7 (2021), compared to 9 in 2016. The indicator is below the regional average.

- **Youth unemployment rate.** Unemployed youth as a share of the youth labor force (ages 15-24) is 37% (2022), compared to 35% in 2017. The indicator is higher than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 74 years (2021), compared to 76 in 2016. The indicator is similar to the regional average.

- **Female labor force participation rate.** Female labor force participation as a percentage of the female working-age population (ages 25+) is 22% (2022). This remains unchanged since 2017. The indicator is below the regional average.

- **Adult unemployment rate.** Unemployed adults as a share of the adult labor force (ages +25) is 13% (2022), compared to 12% in 2017. The indicator is higher than the regional average.

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
