Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Tuvalu in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in Tuvalu will be 45% as productive when she grows up as she could be if she enjoyed complete education and full health.

This is lower than the average for the East Asia & Pacific region (59%) and Upper Middle Income countries (56%).

THE HUMAN CAPITAL INDEX COMPONENTS

• **Probability of Survival to Age 5.** Of every 100 children born in Tuvalu, 98 survive to age 5.

• **Expected Years of School.** In Tuvalu, a child who starts school at age 4 can expect to complete 10.8 years of school by her 18th birthday.

• **Learning-Adjusted Years of School.** Factoring in what children actually learn, expected years of school is 6 years.

• **Average Harmonized Test Scores.** Students in Tuvalu score 346 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.

• **Adult Survival Rate.** Across Tuvalu, 79% of 15-year-olds survive until age 60.

• **Fraction of Children Under 5 Not Stunted.** Approximately 90 out of 100 children are not stunted. This means that 10 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

**UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX**

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The data on the utilization-adjusted human capital index are not available for Tuvalu. The regional average for this indicator is 0.42 and the income group average is 0.33.

**HCI AND COMPONENTS**

- Latest Available Data for Tuvalu
- Average for East Asia & Pacific
- Avg. for Upper Middle Income countries

**Human Capital Index**

- Probability of Survival to Age 5 (%)

- Expected Years of School

- Learning-Adjusted Years of School

- Average Harmonized Test Scores

**U-HCI**

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures show the latest available data, benchmarked against regional averages. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Children who are developmentally on track.** In 2020, 69% of children (ages 24-59 months) were developmentally on track in health, learning and psychosocial well-being. The indicator is lower than the regional average.

- **Neonatal mortality rate.** The neonatal mortality rate is 10 per 1,000 live births (2021), compared to 12 in 2016. The indicator is similar to the regional average.

- **DTP vaccination rate, third dose.** In 2022, 91% of infants received the third dose of the diphtheria, tetanus and pertussis vaccine, compared to 96% in 2017. The indicator is higher than the regional average.

**SCHOOL AGE**

- **Children engaged in child labor.** The share of children (ages 5-17) who are engaged in economic activities is 4% (2020). The indicator is lower than the regional average.

- **Child mortality rate.** The mortality rate for children ages 5-14 is 5 per 1,000 children aged 5 (2021). This remains unchanged since 2016. The indicator is above the regional average.

- **Primary school completion rate.** The primary school completion rate at the official entrance age of the last grade of that level is 88% (2021), compared to 85% in 2016. The indicator is lower than the regional average.

**YOUTH**

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 33 (2021), compared to 34 in 2016. The indicator is higher than the regional average.

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 83% (2019). The indicator is below the regional average.

- **Upper secondary school completion rate.** The upper-secondary completion rate at ages 3-5 years above the intended age for the last grade of that level is 55% (2020), compared to 47% in 2015. The indicator is lower than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 65 years (2021), compared to 64 in 2016. The indicator is lower than the regional average.

- **Prevalence of hypertension.** The prevalence of hypertension among people ages 30-79 is 50% (2019), compared to 48% in 2015. The indicator is above the regional average.

- **Female labor force participation rate.** Internationally comparable data on this indicator is not available for Tuvalu. The regional average for this indicator is 57%.
