Human capital – knowledge, skills, and good health – empowers people to achieve their potential and drives economic growth. This brief tracks progress by Samoa in building and using human capital. This page presents the Human Capital Index (HCI), its components parts, and relevant benchmarks. The HCI quantifies how underinvestment in education and health for today’s children reduces future incomes. Data are the most recently available as of 2020. The back page presents a set of Human Capital Complementary Indicators (HCCI) that shows progress at each stage of the lifecycle.

THE HUMAN CAPITAL INDEX

A child born in Samoa will be 55% as productive when she grows up as she could be if she enjoyed complete education and full health.

This is lower than the average for the East Asia & Pacific region (59%) but higher than for Lower Middle Income countries (48%).

THE HUMAN CAPITAL INDEX COMPONENTS

- Probability of Survival to Age 5. Of every 100 children born in Samoa, 98 survive to age 5.
- Expected Years of School. In Samoa, a child who starts school at age 4 can expect to complete 12.2 years of school by her 18th birthday.
- Learning-Adjusted Years of School. Factoring in what children actually learn, expected years of school is 7.2 years.
- Average Harmonized Test Scores. Students in Samoa score 370 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- Adult Survival Rate. Across Samoa, 89% of 15-year-olds survive until age 60.
- Fraction of Children Under 5 Not Stunted. Approximately 95 out of 100 children are not stunted. This means that 5 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

UTILIZATION-ADJUSTED HUMAN CAPITAL INDEX

The Utilization-adjusted Human Capital Index (U-HCI) scales down the HCI by taking into account how many adults are not employed. The U-HCI for Samoa is 0.22. Thus, children born today will be 22% as productive in adulthood as they could have been if they had access to full health and education, and they became fully employed adults. The U-HCI for girls is even lower at 0.16.

HCI AND COMPONENTS

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
The Human Capital Complementary Indicators (HCCIs) offer a snapshot of human capital investments at four stages of the lifecycle. The figures also report progress over the previous 5 years.

**EARLY CHILDHOOD**

- **Children who are developmentally on track.** In 2020, 73% of children (ages 24-59 months) were developmentally on track in health, learning and psychosocial well-being. The indicator is lower than the regional average.

- **Neonatal mortality rate.** The neonatal mortality rate is 7 per 1,000 live births (2021). This remains unchanged since 2016. The indicator is below the regional average.

- **DTP vaccination rate, third dose.** In 2022, 76% of infants received the third dose of the diphtheria, tetanus and pertussis vaccine, compared to 67% in 2017. The indicator is lower than the regional average.

**SCHOOLAGE**

- **Children engaged in child labor.** The share of children (ages 5-17) who are engaged in economic activities is 13% (2020). The indicator is higher than the regional average.

- **Child mortality rate.** The mortality rate for children ages 5-14 is 2 per 1,000 children aged 5 (2021), compared to 3 in 2016. The indicator is below the regional average.

- **Primary school completion rate.** The primary school completion rate at the official entrance age of the last grade of that level is 114% (2021), compared to 111% in 2016. The indicator is higher than the regional average.

**YOUTH**

- **Adolescent fertility rate.** The number of births for every 1,000 women ages 15-19 is 44 (2021), compared to 46 in 2016. The indicator is higher than the regional average.

- **Youth literacy rate.** The share of youth (ages 15-24) who are literate is 99% (2021). This remains unchanged since 2019. The indicator is above the regional average.

- **Youth unemployment rate.** Unemployed youth as a share of the youth labor force (ages 15-24) is 21% (2022), compared to 19% in 2017. The indicator is higher than the regional average.

**ADULTS & ELDERLY**

- **Life expectancy at birth.** Life expectancy at birth is 73 years (2021). This remains unchanged since 2016. The indicator is lower than the regional average.

- **Female labor force participation rate.** Female labor force participation as a percentage of the female working-age population (ages 25+) is 39% (2022). This remains unchanged since 2017. The indicator is below the regional average.

- **Adult unemployment rate.** Unemployed adults as a share of the adult labor force (ages +25) is 7% (2022), compared to 6% in 2017. The indicator is higher than the regional average.

Note: Missing symbols indicate internationally comparable data are not available to generate the corresponding statistic.
