

# Leveraging Medical Goods and Services Trade for Future Pandemics: An Action Plan

## The need for action and reform now

The joint World Bank-WTO report "Trade Therapy: Deepening Cooperation to Strengthen Pandemic Defenses" outlines the upsides and downsides of trade during a pandemic and discusses the economic rationale for trade reforms and actions that can improve global health security. Based on this analysis, the report offers a concrete action plan of trade and trade-related policy priorities to improve pandemic prevention, preparedness, and response.<sup>1</sup> The action plan is reproduced in this paper.

Policy action and reform are needed now to leverage trade for future health crises, and these can generate long-term payoffs. Although achieving those may have a cost, this cost is likely to be dwarfed by the potential suffering generated by another pandemic. Furthermore, the catastrophic consequences of the coronavirus (COVID-19) pandemic have generated a consensus that policy action and reform are needed at the country, regional, and global levels to manage future crises. This time of consensus presents a historic opportunity that should not be missed.

## A menu of options

The action plan in the attached table offers a menu of options for trade and trade-related policies that governments can enact nationally and in regional and multilateral contexts. It complements the recent ministerial declaration on the WTO response to the Covid-19 pandemic and preparedness for future pandemic and ministerial decision on the Agreement on Trade-related Aspects of Intellectual Property Rights. Policy priorities depend on country conditions and the evolution of the current crisis. As the COVID-19 pandemic lingers, the current focus of policy action should be on the response. But, as the emergency subsides, the focus should shift to prevention and preparedness. But it is recognized that prevention, preparedness, and response also require actions well beyond trade that are outside the scope of the report.

---

<sup>1</sup> Prevention and preparedness refer to ex ante policy actions and reforms that would help determine, assess, avoid, mitigate, and reduce public health threats and risks when a disease outbreak occurs. Response refers to ex post policy actions and reforms to reduce the disease outbreak's economic, social, and health consequences.

## Trade and trade-related policy actions to improve prevention, preparedness, and response for future pandemics

Instrument	National	Regional	Multilateral
<p><i>Measures affecting medical goods</i></p> <p>Tariffs</p>	<ul style="list-style-type: none"> <li>Reduce or eliminate tariffs and internal taxes imposed on essential medical goods.</li> <li>Establish, publish, and maintain a national list of essential medical goods (generating specific tariff lines for these products in the national tariff schedule), and create an interagency coordination mechanism to update and modify the list when needed.</li> </ul> <p><i>Crisis response: Cease imposing import tariffs on critical medical products in short supply. If not permanent, tariff reductions should be for a minimum period to preserve market stability (for example, three years).</i></p>	<ul style="list-style-type: none"> <li>Ensure that all medical goods are fully liberalized in the context of regional trade agreements (RTAs).</li> <li>Review and simplify the relevant rules of origin on medical goods to ensure preference utilization.</li> </ul>	<ul style="list-style-type: none"> <li>Develop an international list of essential medical goods in consultation with the relevant international organizations (such as the WCO, WHO, and WTO).</li> <li>At the WCO, negotiate the creation of new HS subheadings (6-digit codes) to facilitate the national classification and improve the collection of trade statistics in medical goods.</li> <li>Bind currently unbound products (tariff lines) on medical goods in the WTO goods schedules.</li> <li>Revisit the WTO's Agreement on Pharmaceuticals and Expansion of the Information Technology Agreement to liberalize trade in additional medical goods or negotiate a new agreement to this effect.</li> </ul>
<p>Prohibitions and restrictions on imports and exports</p>	<ul style="list-style-type: none"> <li>Eliminate export restrictions in essential medical goods.</li> <li>Review and improve interagency coordination for the introduction of prohibitions and restrictions on imports and exports, including licensing requirements.</li> </ul> <p><i>Crisis response: Refrain from imposing export prohibitions or restrictions during a global health emergency, and ensure that any such measures are implemented as a last resort and only when necessary to prevent or relieve critical shortages of medical goods. If an export prohibition or restriction is introduced, then</i></p> <ul style="list-style-type: none"> <li><i>Ensure the measure is targeted, transparent, proportionate, temporary, and consistent with WTO obligations;</i></li> <li><i>Establish a short duration of the measure (for example, three months) and a review mechanism to extend or modify it subsequently if necessary;</i></li> </ul>	<p>None</p>	<ul style="list-style-type: none"> <li>Share experiences in the relevant forums on the way these measures are introduced, administered, and removed, with a view to drawing lessons and identifying best practices that may assist during a crisis.</li> </ul> <p><i>Crisis response: Limit the duration of export restrictions on essential goods, and establish a consultation mechanism to assess the adverse impact on partners of the emergency measures that have been imposed.</i></p>
