

PROJECT SUMMARY

Nepal

PROJECT NAME

Supporting a Climate-Smart Agriculture Investment Plan (CSAIP)

GRANT OBJECTIVE AND ACTIVITIES

The project supports a Climate-Smart Agriculture Investment Plan (CSAIP) in Nepal which aims to identify key challenges to achieving a productive, resilient and low-emissions agriculture sector. The development of the CSAIP builds on existing knowledge and policy goals, as set out in policy documents, such as the **country's** NDC and the Agriculture Sector Development Strategy (ADS). The support fosters dialogue and builds client capacity to operationalize **the country's** climate commitments and the ADS in the **country's** new federalist structure for the development of targeted policy actions and investment proposals. While the investment plan focuses on two provinces, it will generate recommendations for scaling up the approach nationally.

Enhancing the knowledge base on greenhouse gas mitigation indicators, methodology and expected values, as well as on climate-smart interventions that are innovative and feasible, is expected to increase ambition and inform NDC update. Nepal is a member of the NDC Partnership.
