This 2-page brief provides the 2020 Human Capital Index (HCI) released in September 2020, and a set of indicators that are complementary to the HCI. The HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Although the effects of COVID-19 on the HCI are yet to be measured due to the lack of data, we expect the post-pandemic HCI to be relatively lower due to the deep learning and health losses globally. Data collection efforts to allow updates to the HCI remain critical for all countries to inform policies and programs to address the setbacks to human capital.

**THE HUMAN CAPITAL INDEX**

A child born in Colombia just before the pandemic will be 60 percent as productive when she grows up as she could be if she enjoyed complete education and full health. This is higher than the average for the Latin America & Caribbean region (56 percent) and Upper Middle Income countries (56 percent).

**THE HUMAN CAPITAL INDEX COMPONENTS**

- **Probability of Survival to Age 5.** 99 out of 100 children born in Colombia survive to age 5.
- **Expected Years of School.** In Colombia, a child who starts school at age 4 can expect to complete 12.9 years of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Colombia score 419 on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only 8.6 years.
- **Adult Survival Rate.** Across Colombia, 89 percent of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Fraction of Children Under 5 Not Stunted.** 87 out of 100 children are not stunted. 13 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

**DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS**

In Colombia, the HCI for girls is higher than for boys. The table below shows gender disaggregation for each of the HCI components. The ratio in HCI between the richest and poorest 20 percent of the population in Colombia is 1.30 (global average: 1.35; global range: 1.12-1.68).

Notes for all figures in this brief:
- ○ represents Colombia.
- □ represents the average for Upper Middle Income countries.
- ◇ represents the average for Latin America & Caribbean.
- ▲ represents other countries in the World.
Human capital, a crucial ingredient for economic growth, is multi-dimensional and cumulatively built over the lifecycle. Due to the slow moving nature of the HCI, an additional set of Human Capital Complementary Indicators (HCCIs) offer a snapshot of proximate dimensions of human capital in Colombia that can be monitored to measure simultaneous progress in intermediate outcomes. These selected HCCIs are based on the latest available data (italicized and shown in parenthesis) and benchmarked against regional and country income group averages. They highlight where the need is for investment in people in each stage of life and for data collection and updates for evidence-based policy making.

### EARLY CHILDHOOD
- **Neonatal mortality (deaths per 1,000 live births).** The neonatal mortality rate is 7 per 1,000 live births (2020), lower than both the regional average (10) and the income group average (9).
- **Children receiving minimum meal frequency (%).** Adequate meal frequency among children 0-23 months is 60 percent (2016), below the regional (63%) and income group (68%) averages.
- **Pre-primary school gross enrollment (%).** The pre-primary school gross enrollment ratio is 86 percent (2020), higher than both the regional and income group averages.

### SCHOOL AGE
- **Primary school completion (%).** Primary school completion rate is 104 percent (2020), higher than both the regional (97%) and income group (97%) averages.
- **Gross secondary school enrollment %).** The secondary school gross enrollment rate is 102 percent (2020), higher than both the regional (97%) and income group (94%) averages.
- **Learning poverty (%).** 63 percent (2018) of 10-year-olds cannot read and understand a simple text by the end of primary school, compared to 59 percent at the regional level and 40 percent at the income group level.

### YOUTH
- **Youth NEET (%).** 27 percent (2021) of the youth is not in employment, education or training. This is higher than both the average for its region (24%) and the average for its income group (26%).
- **Adolescent fertility (births/1000 women).** The adolescent fertility rate, i.e., the number of births for every 1000 women aged 15-19, is 63 (2020). This is higher than both the average for its region (59%) and the average for its income group (43%).
- **Gross tertiary education enrollment (%).** Tertiary education gross enrollment ratio is 54 percent (2020), higher than the regional (49%) and income group (49%) averages.

### ADULTS & ELDERLY
- **Female labour force participation (%).** The female labour force participation is 56 percent (2022), higher than both the regional (54%) and income group (50%) averages.
- **Male labour force participation (%).** The male labour force participation is 85 percent (2022), higher than both the regional (79%) and income group (76%) averages.
- **Life expectancy at birth (years).** Life expectancy at birth is 77 years (2020), higher than both the regional (75 years) and income group (74 years) averages.
