

IRAQ

Region: Middle East and North Africa
Income Category: Upper Middle Income

This 2-page brief provides the 2020 Human Capital Index (HCI) released in September 2020, and a set of indicators that are complementary to the HCI. The HCI measures the amount of human capital that a child born today can expect to attain by age 18. It conveys the productivity of the next generation of workers compared to a benchmark of complete education and full health. Although the effects of COVID-19 on the HCI are yet to be measured due to the lack of data, we expect the post-pandemic HCI to be relatively lower due to the deep learning and health losses globally. **Data collection efforts to allow updates to the HCI remain critical for all countries to inform policies and programs to address the setbacks to human capital.**

THE HUMAN CAPITAL INDEX

A child born in Iraq just before the pandemic will be **41 percent** as productive when she grows up as she could be if she enjoyed complete education and full health. This is lower than the average for the Middle East & North Africa region (56 percent) and Upper Middle Income countries (56 percent).

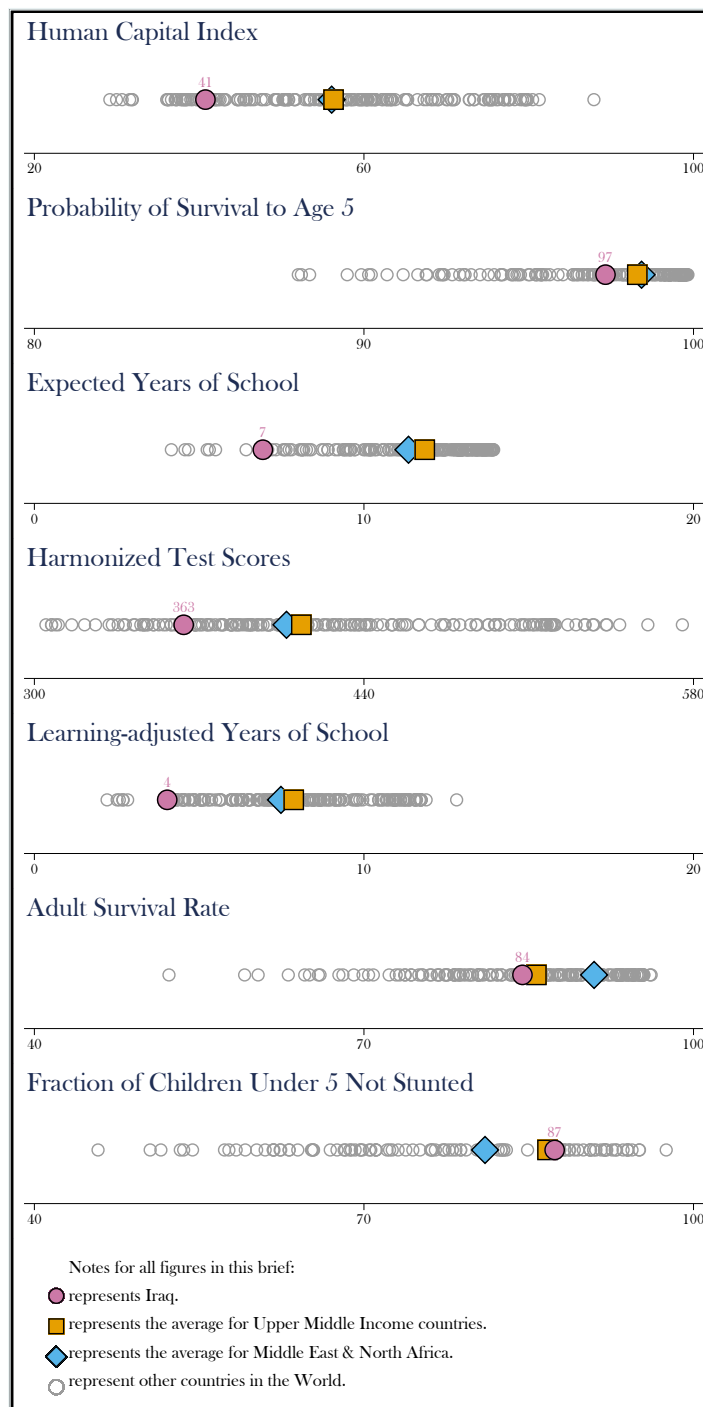

THE HUMAN CAPITAL INDEX COMPONENTS

- **Probability of Survival to Age 5.** 97 out of 100 children born in Iraq survive to age 5.
- **Expected Years of School.** In Iraq, a child who starts school at age 4 can expect to complete **6.9 years** of school by her 18th birthday.
- **Harmonized Test Scores.** Students in Iraq score **363** on a scale where 625 represents advanced attainment and 300 represents minimum attainment.
- **Learning-adjusted Years of School.** Factoring in what children actually learn, expected years of school is only **4 years**.
- **Adult Survival Rate.** Across Iraq, **84 percent** of 15-year olds will survive until age 60. This statistic is a proxy for the range of health risks that a child born today would experience as an adult under current conditions.
- **Fraction of Children Under 5 Not Stunted.** 87 out of 100 children are not stunted. 13 out of 100 children are at risk of cognitive and physical limitations that can last a lifetime.

DIFFERENCES IN HCI ACROSS GENDER AND SOCIO-ECONOMIC GROUPS

In Iraq, the HCI for girls is higher than for boys. The table below shows gender disaggregation for each of the HCI components. There are insufficient data to disaggregate the HCI by socio-economic groups.

HCI and its components	Boys	Girls	Overall
HCI	0.40	0.42	0.41
Survival to Age 5	0.97	0.98	0.97
Expected Years of School	6.7	7.2	6.9
Harmonized Test Scores	353	377	363
Learning-adjusted Years of School	3.8	4.4	4.0
Adult Survival Rate	0.82	0.87	0.84
Not Stunted Rate	0.88	0.87	0.87

Human capital, a crucial ingredient for economic growth, is multi-dimensional and cumulatively built over the lifecycle. Due to the slow moving nature of the HCI, an additional set of Human Capital Complementary Indicators (HCCIs) offer a snapshot of proximate dimensions of human capital in Iraq that can be monitored to measure simultaneous progress in intermediate outcomes. These selected HCCIs are based on the latest available data (*italicized* and shown in parenthesis) and benchmarked against regional and country income group averages. **They highlight where the need is for investment in people in each stage of life and for data collection and updates for evidence-based policy making.**

EARLY CHILDHOOD

- **Neonatal mortality (deaths per 1,000 live births).** The neonatal mortality rate is **14 per 1,000 live births** (2020), higher than both the regional average (9) and the income group average (9).
- **Children receiving minimum meal frequency (%)**. Adequate meal frequency among children 0-23 months is **74 percent** (2018), above the regional (66%) and income group (68%) averages.
- **Postnatal contact with health provider (%).** **78 percent** (2018) of newborns have postnatal contact with health providers during their first two days of life, compared to 71 at the regional level and 84 at the income group level.

SCHOOLAGE

- **Hepatitis B vaccination (%).** Hepatitis B vaccine coverage is **48 percent** (2021). This is lower than both the average for its region (87%) and the average for its income group (84%).
- **Primary school completion (%).** Internationally comparable data on primary school completion rate are not available for Iraq.
- **Learning poverty (%).** Internationally comparable data on learning poverty are not available for Iraq.

YOUTH

- **Adolescent fertility (births/1000 women).** The adolescent fertility rate, i.e., the number of births for every 1000 women aged 15-19, is **72** (2020). This is higher than both the average for its region (25) and the average for its income group (43).
- **Female youth unemployment (%).** Female youth unemployment is **63 percent** (2022), higher than both the regional (36%) and income group (28%) averages.
- **Male youth unemployment (%).** Male youth unemployment is **22 percent** (2022), higher than the regional average (20%) and similar to the income group average (22%).

ADULTS & ELDERLY

- **Female labour force participation (%).** The female labour force participation is **14 percent** (2022), lower than both the regional (32%) and income group (50%) averages.
- **Male labour force participation (%).** The male labour force participation is **83 percent** (2022), higher than both the regional (81%) and income group (76%) averages.
- **Life expectancy at birth (years).** Life expectancy at birth is **71 years** (2020), lower than both the regional (76 years) and income group (74 years) averages.
