*Afritex Ventures is a global fishing company with headquarters in Mauritius.*

Afritex is an investment holding company with strategic investments in African based operations that market seafood to a global base of customers. Through its subsidiary companies, Afritex operates two premium Longline tuna and swordfish operations with a fleet of 9 fishing vessels – one in Port Louis, Mauritius and the other in Beira, Mozambique; our Trawler operations in Maputo, Mozambique from which we yield our high-end shellfish range and our substantial global retail business in South Africa, sourcing seafood for some of Africa’s largest retailers. Afritex will also be launching an all-encompassing food trading platform in the near future, which will take food trading to a new level of efficiency and professionalism. Our group places high value on social responsibility, sustainability in the method in which we harvest our seafood and in conducting fair and ethical business practices. Quality and client service excellence is what we strive to maintain across the board. What sets the Afritex Group apart from our competitors is that we are an owner-run company, with owners being actively involved in the day-to-day operations and decision making.

**Afritex Fishing Ltd**

Afritex Fishing Ltd is one of our two Longline fishing operations and is a Mauritian registered company, with state of the art commercial quay-side operations in Port Louis. This facility will have an on-site ice plant with the capacity to manufacture up to 25 metric tons of ice per day and stores 60 metric tons. We have our own fleet of Longline fishing vessels which fish in the nutrient rich EEZ waters of Mauritius. The primary focus of Afritex Fishing Ltd is on the export of premium quality fresh tuna and swordfish by airfreight, as well as processing and value adding of tuna, swordfish, dorado and other associated by-catch into a value added range of retail ready products.

**Afritex Trading Ltd**

Located within our offices in the Free Port Trade zone in Mauritius, Afritex Trading Ltd will soon become one of the leading seafood trading companies globally. With initial focus on our own production, a state of the art electronic trading platform will be launched in the second half of 2016, which will quickly be expanded to incorporate global seafood production and eventually an all-encompassing food trading solution. Africa has long been known as ‘the bread basket of the world’ and with 65% of the world remaining arable land left in the region, we believe our Trade division is strategically placed to **bring the world to Africa and take Africa to the world.**

Pescamoz is our second Longline fishing company conveniently based in the Port of Beira, Mozambique – through which we run EU, FDA and HACCP accredited packing & processing facility and manage our self-owned fleet of Longline vessels. As is the case with our Afritex Mauritius operations, our primary focus is on the export of premium quality fresh tuna and swordfish, as well as processing a range of frozen value-added retail ready lines from tuna, swordfish, dorado and other by-catch. Our Pescamoz facility has an operational on-site ice plant, providing up to 25 metric tons of ice per day, some of which is sold to local operators. We have a team of staff trained and skilled to handle fresh fish and to process frozen lines.

Kalipesca LDA is our industrial deep sea fishing company, established in 2008 and is situated in the Port of Maputo, Mozambique. Its primary operations are centred on the trawling of prawns, langoustines and lobster. Kalipesca owns three industrial deep-sea trawling vessels - namely Attiya, Izmaylovo and Panevezys. The management team has extensive experience in the fishing sector in Mozambique - from deep-sea prawn trawling, shallow water prawn fishing, longline and line fishing to handling, logistics and processing of seafood for over twenty years. All shellfish is flash frozen on board the vessels, ensuring the best quality product.

Pristine Seafoods is a subsidiary company of the Afritex Group and specialises in the sourcing of premium seafood, both locally and globally, and is fast becoming the preferred supplier of seafood throughout Southern Africa. Most of the products sold is in frozen form. Pristine Seafoods arranges processing of marine harvests where necessary and has access to all markets within the Southern African continent. Principal outlets are supermarket chains and government departments, as well as a substantial international client base. Pristine Seafoods has its own retail product range of tuna, swordfish, mahi mahi and king mackerel steaks; pink prawns, langoustine tails and lobster.

# Our *Management Team*

## PRINCIPAL *Partners*

### **DAVID J. DIAMOND** – Executive Chairman **Afritex Group**

**DAVID DIAMOND** has an extensive career in investment banking, private equity and the start up of new businesses. David started his career as a Mergers & Acquisition investment banker at Credit Suisse in New York City. He later was a founder of the London-based private equity firm Compass Partners and led several of their investments. In the past ten years David has co-founded several successful ventures including Tuun China, a medical device business headquartered in Shanghai, InteMedica, a nutritional and supplements manufacturer and Sonexus Health, a pharmaceutical commercialization company. David currently serves on several boards across a variety of industries.

### **JOEL M. FINEBERG** – Executive Director **Afritex Group / Kalipesca / Pescamoz**

**JOEL M. FINEBERG** is one of the most well known attorneys in the United States and a successful real estate developer in California. Joel is also the founder of Class Action Insurance Consultants which provides consulting services for companies seeking to obtain GAAP qualified risk transfer of class action liability and risk. Joel is a graduate of Emory University and received his J.D. from the Southern Methodist University Dedman School of Law, Dallas, Texas. He has over 20 years of active litigation practice in state and federal courts across the country.

### **MICHAEL H. BANIGAN** – Executive Director **Afritex Group**

**MIKE BANIGAN** has a long and distinguished career in creating, developing and growing new businesses. Mike started his career in insurance services eventually becoming President of one of General Electric's insurance divisions. He then founded the Chronic Disease Fund, the world's largest patient assistance foundation. Mike has also successfully developed several businesses in the pharmaceutical commercialization field including DiseaseTrak and Sonexus Health. Mike serves on several boards across a variety of industries.

### **GAVIN VAN DER BURGH** – Group CEO **Global Fishing**

**GAVIN VAN DER BURGH** currently holds the position of CEO of the group fishing division and has Executive Directorship of Pescamoz, Kalipesca, Pristine Seafoods, Afritex Mauritius and Afritex Hong Kong. Gavin has extensive experience and knowledge in the seafood industry, which has solidified relationships with leading retail giants in the USA and worldwide. Gavin is a past member of the Global Ocean's Council and World Economic Forum.

# Our *Management Team*

## **SENIOR** *Management*

### **MARLENE LOMBARD** – Group Financial Controller **Afritex Group**

**MARLENE LOMBARD** graduated from RAU University in 1996 with a BCom Economics degree. Marlene joined Ernst & Young in Entrepreneurial services, where she gained valuable experience and soon advanced to management level. Over the years Marlene held several senior financial management positions in various large multinational corporations before moving into a commercial management position in the seafood sector, where she has been exclusively focused for the last 10 years. Marlene has been in the Finance department of Afritex since inception.

### **KARLSON PO** – General Manager **Afritex Asia – Hong Kong**

**KARLSON PO** has worked with the principals of Access America Fund and Chinamerica Fund, both based in Texas, USA, since 2004 and is based in the office in Hong Kong. Karlson has over 10 years experience in corporate finance and strategic advisory in the region and is responsible for project execution and coordination, and participated in some reputable Chinese APO/PIPE deals, like CHBT and UTA. He gained his accounting/auditing experience at Ernst & Young and Citibank in Hong Kong. Karlson graduated from King's College, University of London with a degree in Mathematics and Management.

# Our Commitment and Service

Afritex has assembled a global management team with decades of experience in fishing, operations and marketing which enables us to service our clients and suppliers with the perfect combination of professionalism, knowledge and expertise. We have become an employer of choice in each of our locations by fostering a culture of team work and continuous improvement. Afritex is further dedicated to transferring knowledge and skills from foreign experts to local citizens, not only to uplift the community but to ensure that our business will continue for decades to come. Our vision is to be the premier and first choice supplier of seafood from the Indian Ocean, known for the highest level of quality and client service. Being a privately owned and run company gives us the edge over competitors, in that vital decisions are made and implemented immediately and effectively.

## Sourcing

Afritex sources only the best quality seafood globally through relationships with fishermen and aquatic farmers at the oceans and rivers of origin and through our extensive network of source suppliers. We are capable of specialised on-demand sourcing of frozen goods. Due to our well established partnership with buyers both locally and globally, we ensure consistent purchasing of seafood twelve months a year.

## Service and Quality Control

Active account management by our global world class traders, who offer you advice on how best to manage your fresh tuna and swordfish in various markets, as well as frozen tuna, swordfish and associated by-catch. All our facilities have on site Quality Assurance supervisors, who check all product for quality and temperature control. Customer complaints and queries are dealt with swiftly by our Sales Manager.

All Afritex products are held to stringent internationally accepted specifications and final product exports are all tested independently against final product specification and compliance for human consumption.

## Marketing

Afritex offers ongoing marketing support for retail stores or trade partners through advertising of special offers and sampling. Also very effective are endorsements and collaboration with food specialists and celebrity chefs globally. We exhibit our product range at global seafood shows annually, not only to promote our own brand but also to keep our finger on the pulse of international market trends.

## Export and Distribution

Afritex' business model calls for the majority of our products, namely tuna and swordfish to be sold in fresh form. Our fresh fish is caught off our own fleet of vessels, on which we have a crew of seamen specifically trained to handle export grade fish. In addition to the export of fresh fish, we also have a range of frozen products. These include frozen tuna, swordfish, mahi mahi and other by-catch, as well as our Mozambican lobster, langoustines and prawns.

The frozen lines are either sold as whole or value-added into retail lines at our own processing facilities. This will incorporate specifically portioning all of the mahi mahi by-catch into fillets and skinless portions for one of the USA's largest retailers.

## Packaging and Handling

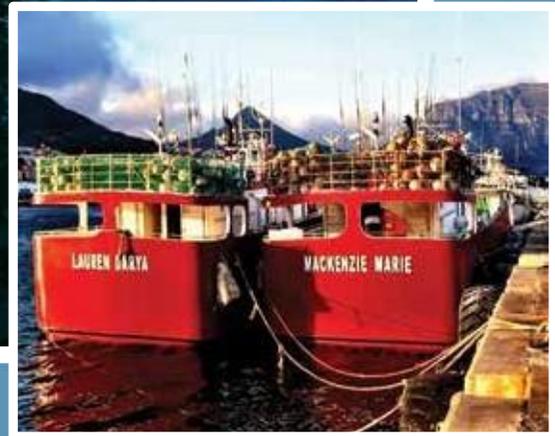

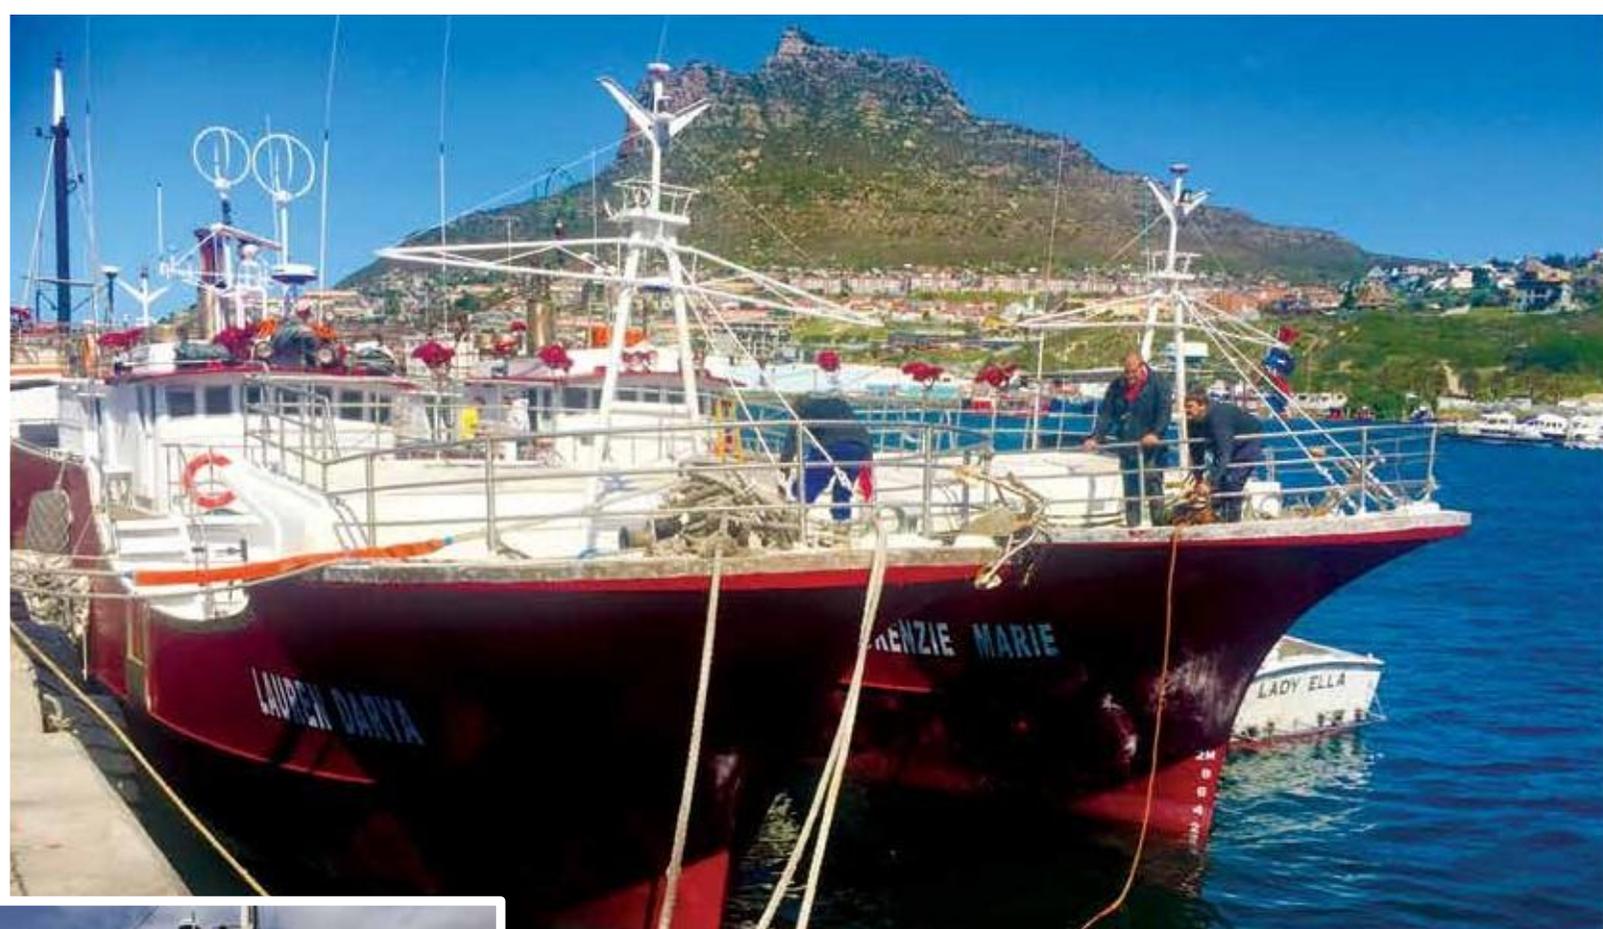

All packaging used is in compliance with food safety standards.

Pallets and outer boxes are clearly marked with the client details and pallets are shrink wrapped to ensure that the products are tamper proof. All product handling is kept to a minimum to ensure the non-abuse of packaging. Products are stored in our cold room at between -20 and -25 degrees Celsius.

## Social Responsibility

As part of our CSI project, Afritex will be partnering with various local charitable organisations in each of the regions we are established in, to provide by-catch fish free of charge in order to feed the underprivileged with a high source of protein.

We are a company that prides ourselves in treating our staff members in an ethical, fair and socially compliant manner.

# Mauritius and Mozambique: *Longline Operations*

## Infrastructure

Afritex operates two premium Longline tuna and swordfish operations, one in Port Louis, Mauritius and the other in Beira, Mozambique. Both operations have their own fleet of Longline fishing vessels and have state of the art quay-side packing and processing facilities, with on-site ice plants. Afritex owns a fleet of 9 Longline fishing vessels.

The primary focus of our Longline operations is on the export of fresh tuna and swordfish by airfreight to Asia and the USA, as well as processing and value-adding tuna, swordfish, mahi mahi and associated by-catch into a range of retail ready products. Both packing and processing facilities are EU, FDA and HACCP accredited and incorporate the process flow that optimises production from the vessel into the cold store.

## • Off Loading & Packing Phase

- Off loading of vessel.
- Cleaning and grading of fish.
- Packing of export fish.
- Processing non premium fish into frozen format and warehousing.

## • Primary distribution

- Provision of logistical services including co-ordination of the fleet of trucks.
- Export documentation.
- Loading of trucks.
- Facilitating customs clearance.
- Delivery from Port Louis to SSR airport.

## • Secondary Distribution

- Cutting onward AWB to final destination.
- Supervising the loading of aircraft.
- Confirmation of receipt at final destination and recording of temperature data loggers.

## • Procurement and Administration

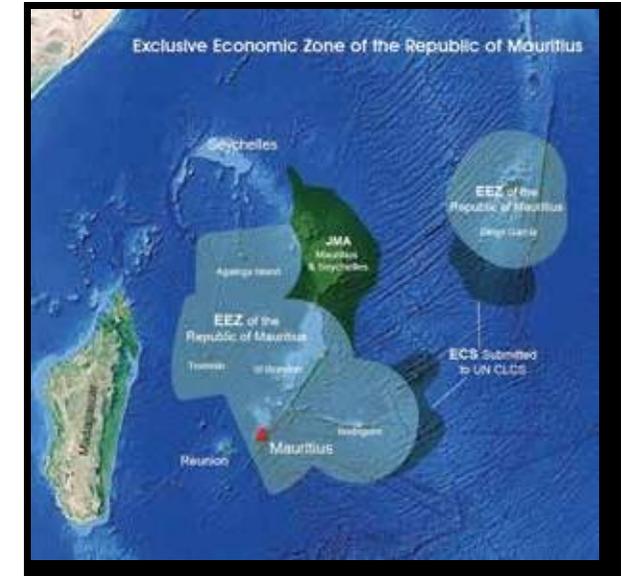

- Allocation of the fish to the best possible revenue earning destination at a specific time of year.
- International credit insurance on the ultimate client.
- Collection and administration of the debtors book.

## • Value Added Services

- Further processing of primary catch into higher revenue streams, such as IVP loins and steaks.
- Further processing of all the by-catch into high value commodities such as fish portions and fillets, using the existing relationship with Afritex group companies as well as the ultimate sale of these items to our existing retail customer base globally.

## Fleet Support Services

With the alterations of cold storage facilities, we can provide additional support services such as the provision of bait. Furthermore using our global logistics footprint, we can import and warehouse the necessary spares and gear needed in support of the fleet.

# Longline Fishing and Processing Operations

## *Mauritius and Mozambique*

Longline fishing is a commercial fishing technique using a long line, called the main line, with baited hooks attached at intervals by means of branch lines called snoods or gangions. A snood is a short length of line, attached to the main line using a clip or swivel, with the hook at the other end. This can be at the surface or at the bottom. Lines can also be set by means of an anchor, or left to drift.

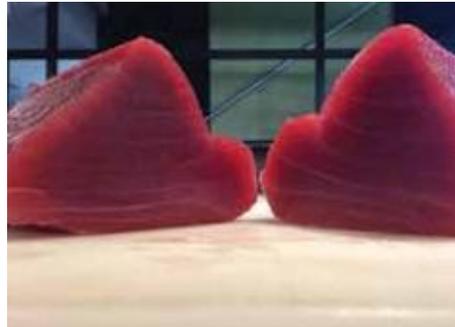

Tuna caught using longline fishing techniques is an important component of world tuna production. Longlines caught on average 12% of all tuna worldwide between 2009 and 2013 (ISSF 2015).

Longlines are used to target a variety of tuna species including Albacore, Bigeye, Yellowfin, and Blue Fin (Pacific, Atlantic, and Southern) tuna and are the primary gear used to capture Albacore and Bigeye tuna worldwide.

Longline catches of Yellowfin tuna have remained fairly stable over time, currently representing less than 20% of the total catch (ISSF 2015).

Our technique consist of a mono-filament main line with branch lines attached. The branch line design can vary but typically is made up of the line, leader, and hook. The line is usually kept near the surface or at a specific depth range with regularly spaced branch lines in between pairs of floats. Longlines set in the upper part of the water column typically target Yellowfin tuna, while gear deployed at deeper depths target Bigeye or albacore tunas.

Environmental sustainability is of utmost importance to our company and as such we have implemented best practices in avoiding by-catch in longline tuna fisheries.

Best practices have been identified for a number of species and include:

- Prohibit the use of wire leaders or shark lines;
- Avoid hot spots (i.e., areas where sharks are commonly caught in large numbers);
- Set longline gear in deeper waters;
- Move fishing locations when shark interaction rates are high;
- Reduce soak times;
- Setting our gear at night so as to avoid the risk to birds in conjunction with line setters in order to set the lines deeper use of circle hooks instead of J-Type hooks;
- Conduct fleet communications to determine where marine mammal sighting may have occurred and move fishing locations when interactions occur.
- Practise Dolphin safe procedures.

## *A directed Fishery*

- Use of all modern technology available such as Seaview, SeaMax as well as in-house catch data generated daily
- Specification and design of vessels
- Optimization of fishing gear
- Constant financial analysis on the global markets
- Innovative airfreight routes and packaging styles
- Sustainable fishing techniques thereby opening end user market opportunities in direct retail supply
- The full team of financial analysts is based in Mauritius
- Global marketing team leaders and group administration now based in Mauritius
- IT platform to be housed and fully supported in Mauritius – currently undergoing Beta testing
- Global trading platform to be housed in Mauritius and initially focus on own production but will fast incorporate all food production from the region – both exports and to cater for African import demands
- A unique traceability program which is the cornerstone of any sustainable fishery designed and developed by Afritex thus homegrown IT.

## *Fish Traceability Application – “Fishtrace”*

# Fish Traceability Application – “Fishtrace”

This is the landing page when the user opens the application. This screen can also have a secondary function, it that it can hold summarized news flashes for specific time frames if wanted. This screen will also open the back end communication. If no communication is available a suitable error will be displayed on the screen. If communication is available it will revert to the next screen.

Screen 2 – Scan Screen

This screen will allow a user to scan a barcode. The scanning process will be available only on the back camera or main camera of the device. The user can see the position of the barcode, and once the full barcode is focused and in view, the system will automatically scan the barcode. This will trigger the data request from the communication method. If it is an invalid barcode, the system will reply this to the user, and allow the user to scan another barcode. If the barcode was valid, the third screen will be opened and the relevant data displayed.

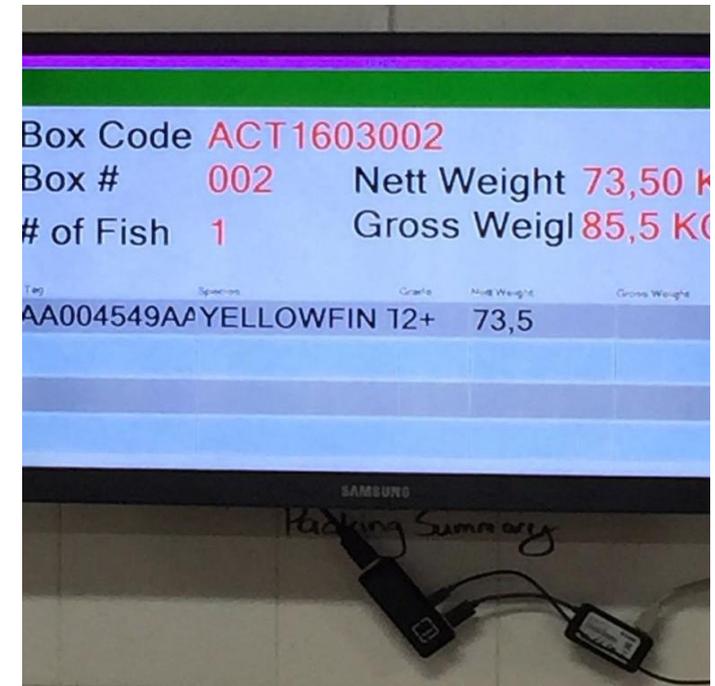

# Fish Traceability Application – “Fishtrace”

This screen will display all the data that is deemed appropriate for the user. Once the user is satisfied with the detail, he or she can select the OK button, and that will move back to the scanning screen, to enable the user to scan a new barcode, or the application can be closed.

I have attached a quote on the mail.

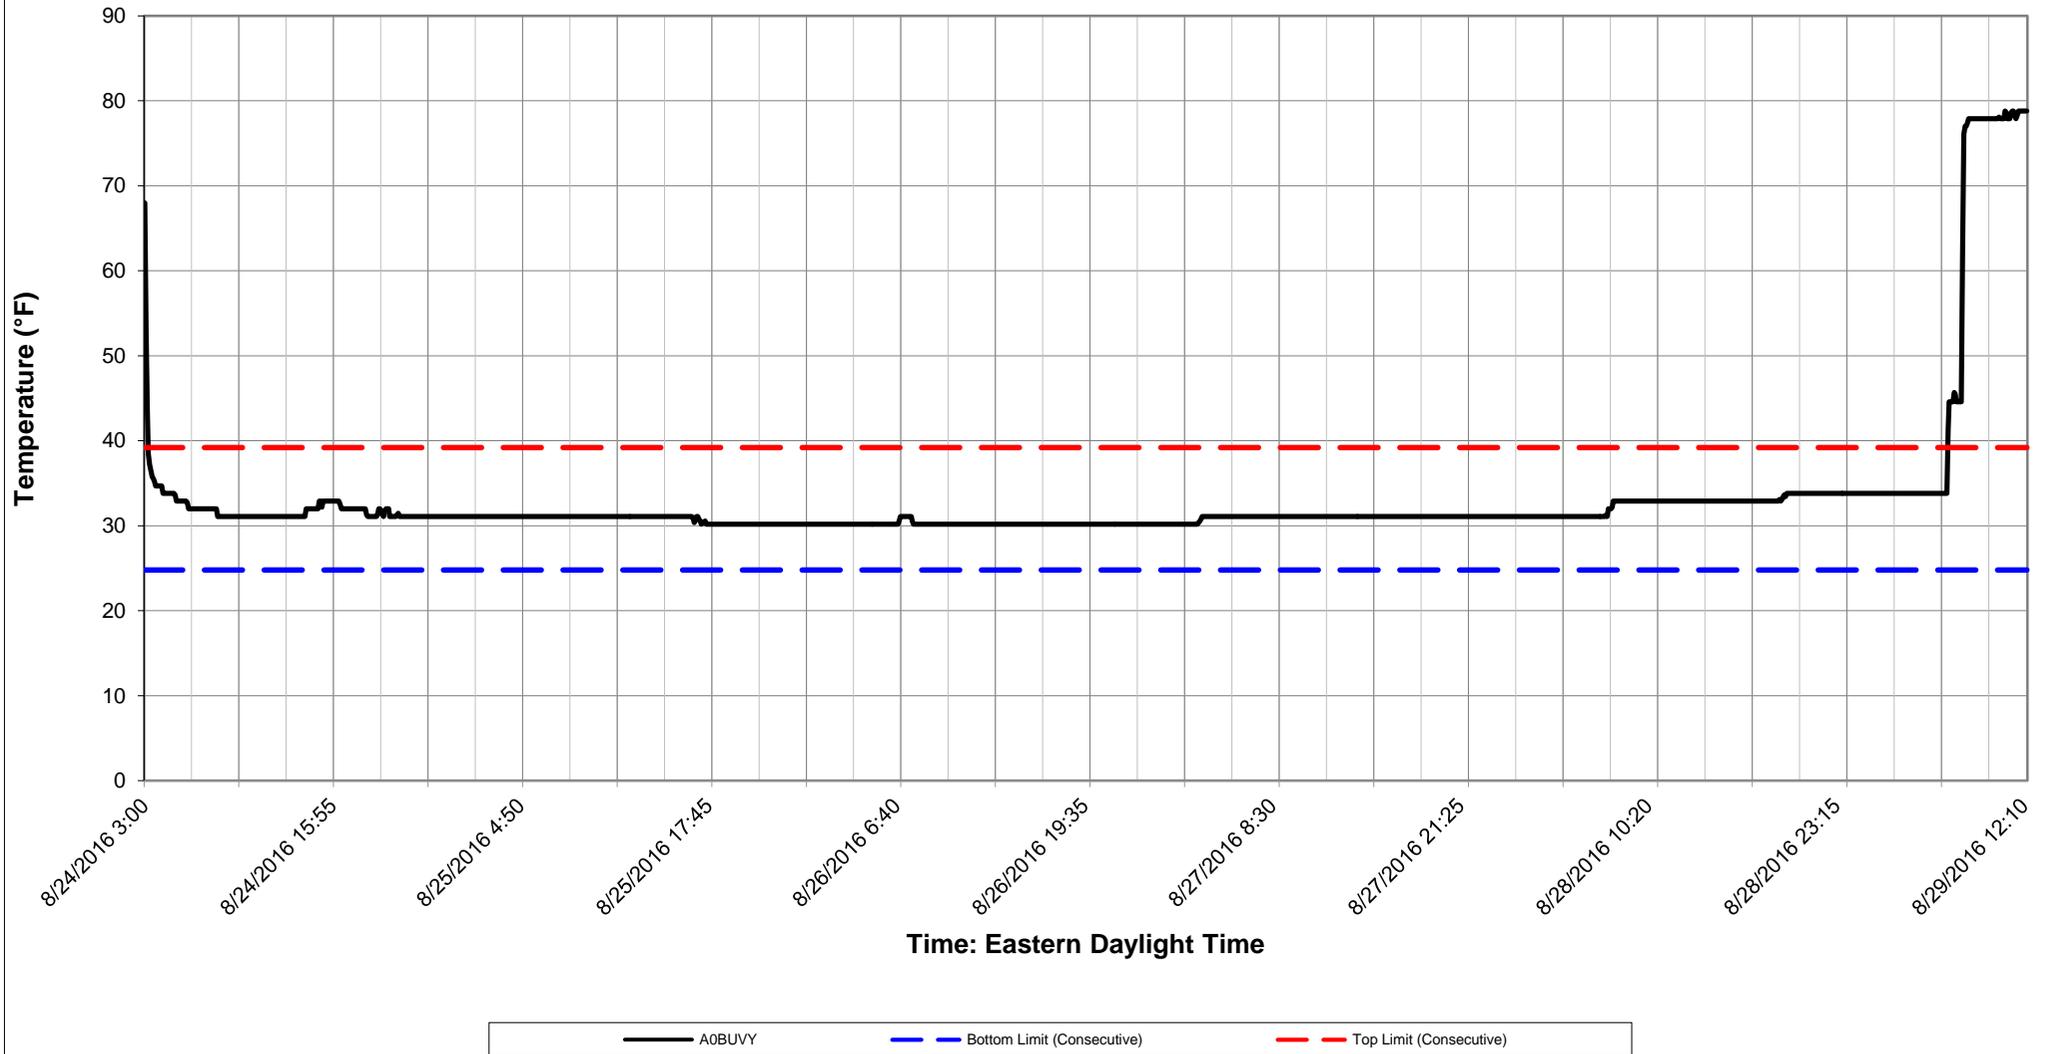

Please let me know if you have any questions or feedback

# TAKING AFRICA TO THE WORLD

## *Secure continuity of the freshest production*

Afritex markets the Mozambique and Mauritius production into global markets. No market can be more critical than the world famous Japanese Tsukiji Tuna auction market in Tokyo. We have successfully been marketing premium Yellowfin and Big Eye tuna since the inception of our business and recently begun the export of ICCAT certified broadbill swordfish to the Japanese market. Global shipments are conducted by controlled airfreight on a weekly basis from both operations, making our supply resource one of the very few twelve month a year production areas.
