Sub-Saharan Africa is one of the most affected regions by conflict and violence, which erodes social cohesion, and, in turn, makes the delivery of services to build human capital more challenging.

Investing in human capital is an accelerator of social cohesion and reduces the drivers of violence, conflict, and fragility.

There is growing evidence that shows how investing in human capital can build social cohesion and mitigate the drivers of fragility, including designing interventions for the inclusion of vulnerable groups and tailoring programs to specific local contexts.

Sub-Saharan Africa (SSA) is one of the regions most affected by fragility, conflict, and violence (FCV) situations. Currently, 20 of the 48 countries in the region are classified as being under violent conflict or high levels of fragility. According to ACLED data, since 2018, the region has recorded more than 88,583 episodes of violence and more than 177,935 fatalities.

Conflict and violence have a strong detrimental effect on human capital (HC). For instance, conflict exposure is negatively associated with child nutrition and access to immunization, and positively associated with a higher likelihood of food insecurity. There is also strong evidence that violent attacks affect children emotionally and have long-term effects on learning outcomes. Conflict and violence also affect the utilization of HC-related services. For instance, residing within a conflict cluster significantly reduces the likelihood of utilization of healthcare services. A recent study in Nigeria has shown that every additional conflict event in a 5-km radius from a child’s village during the previous academic year reduces the child’s probability of school enrolment by two percentage points.

Conflict and violence are also responsible for the large, forced displacement crisis that the region faces. As of 2023, more than 44 million people in SSA are displaced, a 15% increase since 2021. Most (60%) are internally displaced persons (IDPs). Africa hosts three-quarters of all new internal displacements. This makes the provision of public services that contribute to HC accumulation even more challenging for these groups.

Ultimately, conflict and violence have detrimental effects on economic growth. On average, annual growth in countries in intense conflicts in the region is about 2.5 percentage points lower, and the cumulative impact on per capita GDP increases over time.

However, investing in HC can also work as an accelerator of social cohesion and reduce the drivers of violence, conflict, and fragility. Education, for instance, can help build social capital and stabilize a region where the social fabric is fraying. Recent evidence shows that an additional year of schooling lowers the probability of voluntary recruitment into an extremist organization by 13%.

Some studies have found that a 10% increase in enrollment rates in secondary schools can reduce the risk of conflict by 3 percentage points and reduce the duration of conflicts.

POLICY RECOMMENDATIONS

1. **Design for inclusion.** Inclusion of all people in service delivery, irrespective of income, geography, race, gender, ethnicity, disability, religion, or sexual orientation.

2. **Support resilient communities.** Government can tackle deep-rooted social problems through people-centered, participatory solutions that build on local values and institutions.

3. **Continue service delivery during difficult times.** This requires innovative approaches to ensure that everyone can receive health and education services in times of conflict. For instance, a recent evaluation of learning circles outside of school in times of conflict demonstrated improvements in coverage and academic achievements on national standardized tests and strengthened democratic behaviors, peaceful coexistence, and self-esteem of students.\(^\text{13}\)

4. **Tailor interventions to build social cohesion and mitigate the impacts on HC.** For example, schools can be set up as ‘great equalizers’, where the distribution of services helps reduce societal inequalities and promote social cohesion/reconciliation. Curricula should be designed to “deconstruct structures of violence” and “construct structures of peace,” with teachers equipped to carry this out.\(^\text{14}\) Education can prevent conflict and promote peace if services are provided, responding to historical grievances, addressing persistent exclusions, and helping correct inequalities across ethnic, religious, racial, caste, language, or other lines.

ACKNOWLEDGEMENTS

This technical brief is a part of a series compiled for the first Africa Human Capital Heads of State Summit (July 2023) focusing on the importance of investing in young people as a core driver of productivity and growth as seen in recent literature and country experience. Authors and contributors from the Summit Technical Team are: Abdo Yazbeck, Alex Twinomugisha, Amanda Devercelli, Anne Bakilana, Changha Lee, Ernest Massiah, Fanen Ade, Fatima Naqvi, Huma Kidwai, Inaam Ul Haq, Kebede Feda, Maheshwor Shrestha, Maleletu Tuoane, Maria Gracheva, Martin De Simone, Meskerem Mulatu, Mohamed Jelil, Ritika Dsouza, Robert Chase, Rogers Ayiko, Samer Al-Samarrai, Sara Troiano, Shawn Powers, Somya Bajaj, Silas Udahemuka, Srividya Jagannathan, Tekabe Belay, Yared Mekonnen. Copy editing and graphic design was done by Enó Isong and William Ursenbach.

OBJECTIVE AND DISCLAIMER

This series of Africa Human Capital Briefs synthesizes existing research and data to shed light for useful and relevant policy recommendations. The findings, interpretations, and conclusions are entirely those of the authors. They do not necessarily represent the views of the World Bank Group, its Executive Directors, or the governments they represent. All Briefs in the series can be accessed via: www.worldbank.org/en/events/2023/07/25/africa-human-capital-heads-of-state-summit.
