

# Introduction of the Research Project “Contextualizing International Cooperation to Sustain Peace: Pathways to Adaptive Peacebuilding”

21 February 2023

Ako Muto

Executive Senior Research Fellow

Peacebuilding and Humanitarian Support Cluster

JICA Ogata Research Institute

# About the Research Project

- This research project aims to shed light on contemporary forms of international cooperation for **conflict resolution and peacebuilding** and examine their respective challenges, responses, and limitations.
- It explores a new approach to peacebuilding initiated by the UN in 2016, namely **sustaining peace** (UNGA 2016; UNSC 2016), and one new method to pursue it, namely **adaptive peacebuilding**.
- One of the backgrounds of conducting this research is the recognition of **a change in the trend of armed conflicts**. (United Nations and World Bank 2018)

# The Adaptive Peacebuilding Approach to the Context

- The adaptive peacebuilding approach is informed by concepts deriving from complexity theory, resilience, and local ownership.
- To be context-specific is synonymous with taking nonlinear peacebuilding models that underline the importance of local agencies for a sustainable peace process.

# Main findings from the Research Project-1

- The “adaptive approach” taken by this research project is based on the recognition that protracted and recurrent conflicts and the social systems in which they occur are inherently complex.
- The case studies examine the adaptive approach to the context and demonstrate its importance.
  - Introduction of the case study: Mozambique

# Main findings from the Research Project-2

- The premise of the adaptive approach is that for peace to be self-sustaining, **resilient social institutions** that promote and sustain peace must emerge from within the relevant society's cultural, historical, and social context and reflect the reality of people affected by armed conflict.
- International actors can support and facilitate mediation and peacebuilding and **promote an inductive process** that maximizes the parties' capacity to self-organize and allows them to generate agreements that are rooted in the local context.
