a. Based on real mean per capita consumption or income measured at 2017 Purchasing Power Parity (PPP) using the Poverty and Inequality Platform (<http://pip.worldbank.org/>). For some countries means are not reported due to grouped and/or confidential data. b. The annualized growth rate is computed as $(\text{Mean in year 2} / \text{Mean in year 1})^{1/(\text{Reference Year 2} - \text{Reference Year 1})} - 1$. c. Refers to the year in which the underlying household survey data were collected and, in cases for which the data collection period bridged two calendar years, the first year in which data were collected is reported. The initial year refers to the nearest survey collected 5 years before the most recent survey available, only surveys collected between 3 and 7 years before the most recent survey are considered. The final year refers to the most recent survey available between 2018 and 2022. d. Denotes whether the data reported is based on consumption (c) or income (i) data. Capital letters indicate that grouped data were used. e. Covers urban areas only. h. Poverty and Inequality Platform's What's New note.
